The Microsoft Readiness Review series helps people determine if they're ready for the real Microsoft Certified System Engineer (MCSE) exam by identifying strengths and weaknesses, and providing information on areas for improvement. "MCSE Readiness Review Exam 70-067 Microsoft Windows NT 4.0 Server" measures abilities to plan for, implement, administer, and troubleshoot information systems that incorporate the high-performance server operating system in a simple computing environment - one that might include one or more servers, a single domain, and a single location; and it might have file-sharing and print-sharing capabilities. Skills that are assessed include installation and configuration, managing resources, connectivity and monitoring and optimization. A test delivery engine on CD covers exam objectives by randomly providing dozens of sample questions from a pool of hundreds more, so students can retest themselves with different questions. And all responses both right and wrong result in helpful explanations. A companion book features test preparation suggestions and a list of all questions included in the Readiness Review exam.
