Rapid developments in electronic technology have made important effects on Education systems in the world. It is doubtless that new technology has affected both economical system and social and education system. People who plan the future education have to know where this technology inclines to and act considering this. Technology is a powerful mean to re form schools, increase students' success and makes education effective. In the history of various country's cultures physical education has served people for differing purposes. Since the primitive ages, physical activities have played an important role in the society formally or informally. Physical activities have been needed for a number of reasons; such as, defense, environmental factors and continuing the lives. In some other situations, the most important motive for physical activity has been the longing for a more quality life. It was found that the use of technology in physical education programs increased the motivation to materials offered and learning. Physical education teachers have started to be enthusiastic n using the technology together with the potential of the internet in their class. The results of the studies showed that the use of technology in physical education as a teaching tool could be useful for both the teachers and the students. Technology offers the atmosphere which can provide students autonomous learning.

The use of the cognitive interviewing method for survey question testing has proliferated and evolved over the past 30 years. In more recent years the method has been applied to the evaluation of information letters and leaflets and to research consent forms. This book provides a practical handbook for implementing cognitive interviewing methods in the context of applied social policy research, based on the approach used by the authors at the NatCen Social Research (NatCen) where cognitive interviewing methods have been used for well over a decade. The book provides a justification for the importance of question testing and evaluation and discusses the position of cognitive interviewing in relation to other questionnaire development and evaluation techniques. Throughout the book, the focus is on providing practical and hands-on guidance around elements such as sampling and recruitment, designing probes, interviewing skills, data management and analysis and how to interpret the findings and use them to improve survey questions and other documents. The book also covers cognitive interviewing in different survey modes, in cross national, cross cultural and multilingual settings and discusses some other potential uses of the method.
