After the death of Dr. Littlefield it was decided that I should undertake the revision of the whole of Atomic and Nuclear Physics: an Introduction for the third edition, and it was soon apparent that major changes were necessary. I am confident that these changes would have had Dr. Littlefield's approval. The prime consideration for the present edition has been to modernize at a minimum cost. As much as possible of the second edition has therefore been retained, but where changes have been made they have been fairly drastic. Thus the chapters on fine structure, wave mechanics, the vector model of the atom, Pauli's principle and the Zeeman effect have been completely restructured. The chapters on nuclear models, cosmic rays, fusion systems and fundamental particles have been brought up to date while a new chapter on charm and the latest ideas on quarks has been included. It is hoped that the presentation of the last named will give readers a feeling that physics research can be full of adventure and surprises.

This book is a major outcome of a seven-year European Commission funded project on professional development for preservice and in-service teachers and a contribution to the UN decade of education for sustainable development. Written for practicing teachers and other professionals, it will be essential reading for trainee teachers and teachers studying courses in whole school development and education for sustainable development. Each section of the book integrates theoretical and personal knowledge with the contextual knowledge provided by the case studies. The first section offers overviews of school development, whole school approaches, and self-evaluation, and points to the inadequacy of school effectiveness

and improvement models for school development. The second section is made up of case studies of schools in England, the Netherlands, Greece, and Malta that are developing whole school approaches. Each describes work in progress, and critical analysis reveals the processes supporting the school's development and its holistic approaches. The final section indicates ways in which schools can promote school development through whole school approaches and suggests relevant resources. The book shows that educating children to become active global citizens who strive for sustainable lifestyles requires transforming how schools educate. In the United Nations' agenda for its decade of education for sustainable development that began in 2005, learning through doing and action-focused education are central--and these approaches are at the heart of this book.

The Sunnewspaper asked if Chris Morris's July 2001 Brass Eye Special on paedophilia was 'the sickest TV ever?' It was certainly the most controversial, though his uncompromising style of comedy meant he was rarely far from trouble. Morris first came to national prominence at the heart of a group of virtually unknown comedians brought together by Armando Iannucci. This book follows them from their 1991 news satire *On the Hour*, which transferred from radio to television where it was reinvented as the equally successful *The Day Today*. It became impossible to watch bulletins without thinking of Morris's

Paxmanesque anchor character chastising a reporter -- 'Peter! You've lost the news!' -- or authoritatively delivering nonsense headlines: 'Sacked chimney worker pumps boss full of mayonnaise.' Meanwhile co-star Steve Coogan created a lasting anti-hero in Alan Partridge, imbued with a horrible life all of his own. But Morris himself was always the most compelling character of all. Drawing on exclusive new interviews and original research, this book creates a compelling portrait of Morris from his earliest radio days and of the comedians and writers who frequently took on the industry they worked in, polarising opinion to such a degree that government ministers threatened to ban them entirely. THIS IS THE NEEEWWWWS!
