The Road to Balinor Theory workbooks (ABRSM)

A history of color and commerce from haute couture to automobile showrooms to interior design. When the fashion industry declares that lime green is the new black, or instructs us to "think pink!," it is not the result of a backroom deal forged by a secretive cabal of fashion journalists, designers, manufacturers, and the editor of Vogue. It is the latest development of a color revolution that has been unfolding for more than a century. In this book, the award-winning historian Regina Lee Blaszczyk traces the relationship of color and commerce, from haute couture to automobile showrooms to interior design, describing the often unrecognized role of the color profession in consumer culture. Blaszczyk examines the evolution of the color profession from 1850 to 1970, telling the stories of innovators who managed the color cornucopia that modern artificial dyes and pigments made possible. These "color stylists," "color forecasters," and "color engineers" helped corporations understand the art of illusion and the psychology of color. Blaszczyk describes the strategic burst of color that took place in the 1920s, when General Motors introduced a bright blue sedan to compete with Ford's all-black Model T and when housewares became available in a range of brilliant hues. She explains the process of color forecasting—not a conspiracy to manipulate hapless consumers but a careful reading of cultural trends and consumer taste. And she shows how color information flowed from the fashion houses of Paris to textile mills in New Jersey. Today professional colorists are part of design management teams at such global corporations as Hilton, Disney, and Toyota. The Color Revolution tells the history of how colorists help industry capture the hearts and dollars of consumers.

From the Directors of the Award-Winning Documentary *Microbirth* At least two amazing events happen during childbirth. There 's the obvious main event, which is the emergence of a new human into the world. But there 's another event taking place simultaneously, a crucial event that is not visible to the naked eye, an event that could determine the lifelong health of the baby. This is the seeding of the baby 's microbiome, the community of "good" bacteria that we carry with us throughout our lives. The seeding of the microbiome, along with breastfeeding and skin-to-skin contact, kick-starts the baby 's immune system and helps protect the infant from disease across a lifetime. Researchers are discovering, however, that interventions such as the use of synthetic oxytocin, antibiotics, C-sections, and formula feeding interfere with, or bypass completely, the microbial transfer from mother to baby. These bacteria are vital for human health, and science has linked an imbalance in the human microbiome with multiple chronic diseases.

Drawing on the extensive research they carried out for their documentary film *Microbirth*, authors Toni Harman and Alex Wakeford reveal a fascinating new view of birth and how microscopic happenings can have lifelong consequences, for ourselves, our children—and our species as a whole.
