Health care in the US and elsewhere has been rocked by economic upheaval. Cost-cuts, care-cuts, and confusion abound. Traditional tort and contract law have not kept pace. Physicians are still expected to

deliver the same standard of care -- including costly resources - to everyone, regardless whether it is paid for. Health plans can now face litigation for virtually any unfortunate outcome, even those stemming from society's mandate to keep costs down while improving population health. This book cuts through the chaos and offers a clear, persuasive resolution. Part I explains why new economic realities have rendered prevailing malpractice and contract law largely anachronistic. Part II argues that pointing the legal finger of blame blindly or hastily can hinder good medical care. Instead of "whom do we want to hold liable," we should focus first on "who should be doing what, for the best delivery of health care." When things go wrong, each should be liable only for those aspects of care they could and should have controlled. Once a good division of labor is identified, what kind of liability should be imposed depends on what kind of mistake was made. Failures to exercise adequate expertise (knowledge, skill, care effort) should be addressed as torts, while failures to provide promised resources should be resolved under contract. Part III shows that this approach, though novel, fits remarkably well with basic common law doctrines, and can even enlighten ERISA issues. With extensive documentation from current case law, commentary, and empirical literature, the book will also serve as a comprehensive reference for attorneys, law professors, physicians, administrators, bioethicists, and students.

Award-winning journalists expose the horrific practices within America's health care system, profiling patients and doctors and offering startling personal stories to illuminate what's gone wrong. "Every American ought to read this book." —The Plain Dealer Tens of millions of people with inadequate or no medical coverage . . . dirty examination and operating rooms in doctors' offices and hospitals . . . more people killed by mistakes than by many diseases. This may sound like the predicament of a failed state, but this is America's health care reality today. The United States spends more per capita on health care than any other nation, yet benefits are shrinking and life expectancy here is shorter than in countries that spend significantly less. Meanwhile, HMOs, pharmaceutical companies, and hospital chains reap tremendous profits, as our elected politicians, beholden to these same companies, enact piecemeal measures that lead to needless deaths, refusing to come to grips with a system on the verge of collapse. A superb investigative work that is enormously compelling and addresses the concerns of every American, *Critical Condition* offers an insightful prescription for getting the system back on the right track.
