The management of intangible resources like competence, relationships, brands, processes and systems is of vital importance to creating and maintaining competitive advantage in Business. With technology evolving at the current rate, it can be nearly impossible to keep up and maintain a competitive edge. ¿ Intellectual Capital as a Management Tool: Essentials for Leaders and Managers covers a review of the development of the intellectual capital field and discusses the key domains of study where the intellectual capital view of the firm has made major contributions. The book introduces an updated version of the intellectual capital navigator as an operational tool to help managers maximise value generation from an organisations portfolio of diverse resources. This tool is the only tool that enables organisations to use the resource based view of the firm in an operational way. The book also discusses future developments of the intellectual capital navigator

increasing its precision around the financial aspects of the organisation. The book has broad application across all types of organisations and in all operating environments, and is vital reading for managers who want to understand and exploit the importance of managing intellectual capital. Organizations, Agencies, and Institutions Cambridge University Press

The main objective of this book is to provide a general platform for researchers to present and discuss their studies in administrative sciences. Administrative sciences include but are not limited to public administration, political science, economics, business management, finance and econometrics. In this book, there are eight (8) papers selected to go through a strict peer-reviewed process and published. The scope of these studies consists of public administration, sociology, political science, business management, economics, and finance.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text

in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

International Human Resource Management John Wiley & Sons
In some important respects floodplain management and flood hazard research is different in Britain from that in other countries. This collection of papers from a conference provides some comparisons. It covers urban flooding, institutions and policy, land use policy, hazard response, and project appraisal and risk assessment.

As traumatic events, disasters, and war pervade everyday life around the globe, posttraumatic stress disorder (PTSD) inevitably affects many people. The Clinical Manual for Management of PTSD provides clinicians with the latest information on PTSD. In 16 well-organized, accessible chapters, world leaders in research on epidemiology, neurobiology, psychotherapy, psychopharmacology, and other somatic therapies outline the most up-to-date evidence-based approaches to assessment and management of patients with PTSD. This practical guide covers modalities for therapeutics and management ranging from pharmacotherapy to cognitive processing therapy to virtual reality exposure therapy. It can be used as a complete text for residents and students to gain a solid understanding of PTSD and current treatment modalities, or as a desktop reference for experienced clinicians in daily practice to consult for specific information. The Clinical Manual for Management of PTSD provides clinicians and students with a consolidated and thoughtful reference that can be used to complement and enhance their everyday practice. This book bridges the gap between the research community and the clinician by providing a comprehensive resource of clinically relevant information on PTSD.

Proceedings of International Conference on Remote Sensing for Disaster Management Cengage Learning Emea

This valuable book is a comprehensive volume on mangroves, with information accessible to both botany professionals and students. It provides an easy method of identifying mangroves and distinguishing one species from another. What is a mangrove and what are the criteria of mangroves are explained, along with descriptions of distinctions among major mangroves, mangrove associates, mangrove halophytes, and back mangals. Many photos and illustrations are provided, showing the visible features of mangroves. The volume also covers a range of other topics, including habitats and climatic conditions, morphological and reproductive features, how climate change is affecting mangroves and methods of mitigation and conservation. This book is about mangroves, the intertidal coastal forests that struggle every moment against hungry tides because mangroves flourish at the interface zone of land and sea. Like an evergreen forest in the tropical and subtropical regions of the world, mangroves form definite coastal vegetation, providing protection to people living in such fragile zones against the occurrence of frequent natural calamities. Key features: Introduces important facts about mangroves: definition, early records of mangroves, categorization, and more Looks at the distribution of mangroves worldwide along with features of mangrove habitats and climatic conditions Describes the ecology and environmental conditions, particularly the concept of intertidal zones along estuary positions where tidal flows inundate mangroves Discusses the distinct morphological attributes and reproductive phenology of major mangroves Details the attributes of mangroves, covering a total of 78

species of intertidal flora, including 32 true mangroves, along with their diagnostic features, salient attributes, and illustrations for easy identification Highlights the burning environmental issue of climate change and its impact on mangroves Provides a variety of methods of restoration, conservation, and protection of mangroves

What happens when the demanding consumers who nearly brought the U.S. automobile industry to its knees focus the same kinds of pressure on the industry that represents one-

seventh of the U.S. economy—health care? The health organizations that combine quality, convenience, information, choices, and lower costs will be the winners in this revolution. Regina Herzlinger, chaired professor at the Harvard Business School, distills the facts from the noise surrounding the one industry whose measures of success are life and death. In a thoroughly readable, anecdotal style, she pinpoints the drivers of change—the savvy consumer, the cost-conscious payer, and the rapidly improving technology—that will revolutionize the American health-care system. This is a must-read for those in every corner of the immense health-care web. With its strong narrative style, this is a book that will be read and talked about by everyone concerned about the future of American health care.

The natural disasters are the killer agents which can/can't be predicted even though we have modern technology. Every year, in one place or another, disasters striking which is devastating the area and surroundings, leading to ecological disruption besides huge loss of life and property. India is vulnerable to cyclones, landslides/avalanches, earthquakes, floods, droughts, forest fires, epidemics, etc. The 5700-km long coast of India, with its dense population

is vulnerable to cyclones/low depressions, tsunamis, etc. The 2400-km long rugged Himalayan terrain is vulnerable to landslides, avalanches and earthquakes. India is not only vulnerable to natural disasters, it is also experiencing industrial accidents. The Bhopal Gas tragedy is one of the major man-made disasters in the world. The state of Andhra Pradesh has 970-km long coastline with two major rivers, etc. The conference is conducted in Visakhapatnam, is famous for industries and tourism. Recently, several industrial accidents took place, besides major natural disasters like Hud-Hud, etc. Disaster management shall be implemented from the grass root level in vulnerable areas to improve the capacity building, so as to minimize the losses. The capacity building coupled with technology results in reduction of loss of life and property.

Conservation Biology for All World Bank Publications
Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated

constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

The Business of Health Care in the New Century CRC Press

Ensuring the sustainability of early stage companies and increasing awareness of the need for balancing targets against different stakeholder groups among young companies are not well developed. Young companies, in the first place, want to achieve financial success very often without regard for aspects such as the environment, positive relationships with employees, suppliers or other stakeholder groups, fulfilling requirements of labor law, etc. Another issue is that of companies whose business models are based on actuarially-preferred concepts, such as sharing economy, sustainable development, e-comers, e-commerce, renewable energy, social media, and others. A key issue is the resignation of companies from an approach to business, based on the foundations of classical economics to the sharing economy. Theory and practice seek new solutions in the sphere of value sharing in these new areas of sharing, and innovative forms of its implementation. Intriguing is the relationship of these business models with sustainability issues, as well as wondering how technology can influence sustainability. A contemporary approach to consumer value fits in with the assumption of a shared economy. It is interesting how it affects the assumptions of sustainability of business. The ongoing changes in the value

system of potential consumers create new conditions for the design of sustainability business models and creation of innovation.

The Managed Health Care Handbook Gale / Cengage Learning

This publication examines issues of water sector reform and performance from the perspectives of institutional economics and political economic studies. The authors develop an alternative quantitative assessment methodology based on the principle of 'institutional ecology', as well as data collected from 127 water experts from 43 countries and regions around the world using a cross-country review of recent water sector reforms within an institutional transaction cost framework.

OECD Publishing

Asbestos litigation is the longest-running mass tort litigation in U.S. history. Through 2002, approximately 730,000 individuals have brought claims against some 8,400 business entities, and defendants and insurers have spent a total of \$70 billion on litigation. Building on previous RAND briefings, the authors report on what happened to those who have claimed injury from asbestos, what happened to the defendants in those cases, and how lawyers and judges have managed the cases.

Fundamentals of Management John Wiley & Sons

Sickle cell disease can be severe and disabling. When properly treated, patients live longer and with better quality life. This is a US government publication intended to provide evidence-based guidelines for the care of these patients for the use of all concerned providers as well as patients and family members. This book is

available in print here for convenience. It is also available as a free download at <http://www.nhlbi.nih.gov/health-pro/guidelines/sickle-cell-disease-guidelines/>
