Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically sensitive criteria.

Since the inception of its program of Standards development, CWLA has formulated a series of Standards based on current knowledge, the developmental needs of children, and tested ways of meeting these needs effectively. The preparation of Standards involves an examination of current practices and the assumptions on which they are based; a survey of professional literature and standards developed by other groups; and a study of the most recent scientific findings of social work and related fields, such as child development, education, mental health, psychology, medicine, psychiatry, and sociology, as they bear on child welfare practice. The final formulation of each Standards volume follows extended discussion of principles and issues by committees of experts in each

service, the drafting of a preliminary statement, and a critical review by CWLA member agencies and representatives of related professions and other national organizations. The format of each volume is similar: each Standard is numbered, with subsumed elaboration, and is also cross-referenced and indexed. #### Handbook of Health Social Work

Americans are accustomed to anecdotal evidence of the health care crisis. Yet, personal or local stories do not provide a comprehensive nationwide picture of our access to health care. Now, this book offers the long-awaited health equivalent of national economic indicators. This useful volume defines a set of national objectives and identifies indicators--measures of utilization and outcome--that can "sense" when and where problems occur in accessing specific health care services. Using the indicators, the committee presents significant conclusions about the situation today, examining the relationships between access to care and factors such as income, race, ethnic origin, and location. The committee offers recommendations to federal, state, and local agencies for improving data collection and monitoring. This highly readable and well-organized volume will be essential for policymakers, public health officials, insurance companies, hospitals, physicians and nurses, and interested individuals.
