Research has shown that, for many teens, trauma can lead to addiction. Now, for the first time ever, two mental health experts offer a powerful, integrative program to effectively treat teens with these co-occurring issues. Trauma and addiction often present side by side. However, up until now, clinicians have lacked the tools needed to treat these two issues together. Based in cognitive behavioral therapy (CBT) and mindfulness—two proven-effective therapies for addiction and mental health issues—*Treating Co-occurring Adolescent PTSD and Addiction* is essential for anyone working with adolescents with addiction and post-traumatic stress disorder (PTSD). Developed and researched explicitly for dual diagnosis adolescent clients, this book provides a range of mindfulness practices and tools to help your client be present in what he or she is experiencing—instead of slipping into a pattern of avoidance. In addition, the cognitive behavioral strategies can help adolescents who are at risk of recurrent trauma, and who could therefore benefit from practicing coping strategies to assist them in their current daily situations. This is a must-have resource for any mental health provider treating adolescents with dual diagnosis of PTSD and addiction.

Sitting Together Mindfulness-Based Cognitive Therapy for Depression, Second Edition

Praise for *Acceptance and Mindfulness in Cognitive Behavior Therapy: Understanding and Applying the New Therapies* "One of the most fruitful

aspects of the encounter between classical Buddhist knowledge and modern science has been the emergence of new therapeutic and educational approaches that integrate contemplative practice, such as mindfulness, and contemporary psychology methods, such as those of cognitive therapy. The systematic approach of this book, wherein the insights of both classical Buddhist and contemporary psychology are integrated, represents a most beneficial and powerful method of ensuring a healthy mind and heart."

—His Holiness the Dalai Lama "What has been missing in the midst of partisan battles between orthodox CBT therapists and enthusiastic proponents of newer acceptance/mindfulness approaches is a reasoned, scientifically grounded discourse that would help researchers and clinicians alike sort through the various claims and counterclaims. This book, skillfully conceived and edited by James Herbert and Evan Forman, provides just such a sober and open-minded appraisal of a trend that has sometimes suffered both from too much hype from one side and too sweeping a rejection by the other. This volume encourages careful consideration of both positions and can advance evidence-based psychosocial therapy both conceptually and procedurally to the benefit of all." —From the Foreword by Gerald C. Davison, PhD, University of Southern California

A Clinical Guide Guilford Press

In recent years, there has been a growing awareness of the multiple interrelationships between depression and various physical diseases. The WPA is providing an update of currently available evidence on these interrelationships by the publication of three books, dealing with the comorbidity of depression with diabetes, heart disease and cancer. Depression is a frequent and serious comorbid condition in diabetes, which adversely affects quality of life and the long-term prognosis. Co-occurrent depression presents peculiar clinical challenges, making both conditions harder to manage. Depression and Diabetes is the first book devoted to the interaction between these common disorders. World leaders in diabetes, depression and public health synthesize current evidence, including some previously unpublished data, in a concise, easy-to-read format. They provide an overview of the epidemiology, pathogenesis, medical costs, management, and public health and cultural implications of the comorbidity between depression and diabetes. The book describes how the negative consequences of depression in diabetes could be avoided, given that effective depression treatments for diabetic patients are available. Its practical approach makes the book ideal for all those involved in the management of these patients: psychiatrists, psychologists, diabetologists, general practitioners, diabetes specialist nurses and mental health nurses.
