The book is divided in 4 parts. In the first one, the importance of the analysis of the cardiac dynamics using the ambulatory monitoring technique is presented. The second part contains the

description of foundations of impedance cardiography (ICG), the models used to describe the ICG technique and the description of available systems for ambulatory monitoring of cardiac hemodynamics. The third part is devoted to the validation of the ambulatory ICG method, the verification of the quality of long term ICG recordings and the discussion of the limitations of this technique. In the last part, some clinical and research applications of the ICG ambulatory monitoring are presented. The simultaneous recordings of electrocardiogram (ECG) and ICG in the transient cardiac arrhythmia events illustrate the potential applications of that method for quantitative analysis of hemodynamics when the implementation of the stationary methods would be either difficult or not possible to do. The book is followed by references, alphabetical index and appendices containing the technical data of the available systems for portable monitoring of cardiac hemodynamics.

This book discusses current health care challenges and new strategies for innovative solutions in this area from an interdisciplinary perspective of health care management, business economics, and medicine. It presents the idea of a “ boundaryless hospital ” , a conceptual model of a patient-centric, value-based health network that overcomes typical sectorial, organizational, and geographical boundaries and offers greater efficiency and better quality outcomes for patients. Effective health care for a growing and aging population is a major challenge for economies all over the world. New breakthroughs in medical technology and pharmaceuticals as well as digitization provide scope for more efficiency and for a better quality of health care. Novel organization forms and management concepts are key for coping with the increasing cost pressure observed in most health care systems. The contributions in this volume present innovative strategies for developing and implementing the concept of a boundaryless hospital. They highlight experiences from various countries and with different treatments. The book project was initiated and carried out by the Center for Advanced Studies in Management (CASIM), the interdisciplinary research center of HHL Leipzig Graduate School of Management for business administration in the 21st century.
