Penguin Books

This year marks the 50th anniversary of the British cult classic movie The Italian Job. This

landmark anniversary presents a unique opportunity to celebrate the film with a coffee table book packed full of images, insights and revelations. Loaded with Sixties swagger, and famed for its endlessly quotable dialogue and one of the most impressive car chases in movie

history, The Italian Job is the ultimate celebration of 'cool Britannia'. From the opening sequence of Rossano Brazzi gliding through the Alps in an orange Lamborghini Miura, to the high-speed getaway across the city of Turin in three Mini Coopers, The Italian Job is a petrolhead's dream. The Self Preservation Society will detail how all these cars, including the Aston Martin DB4 and E-Type Jaguars were found and ultimately where they are today. Over the last 20

years, author Matthew Field he has interviewed all the key people involved in the 1969 production. Through him, their stories are revealed, often for the first time. Based on more than 50 in-depth interviews with the cast and crew, and lavishly illustrated with hundreds of never-before-seen photographs and production documents, this definitive book will explode some myths, include a few revelations and tell the fascinating full story of this

perennially popular movie.

How to Modify Your Mini Fountain Press, Limited

The "classic" Mini is a sixties icon that

remained in production for 40 years. Unveiled to the press in August 1959, the Mini ignored many long-established design principles and bristled with innovative features. The car instantly won favor with tuners and modifiers, and today the Mini remains one of the most popular project cars with performance tuners. A thriving support structure of clubs, specialist magazines and parts suppliers ensures that the Mini will remain popular with tuning enthusiasts for many years to come. Original Mini Cooper and Cooper S Bentley Pub Mini Down Under traces the history of one of New Zealand's - and the world's -

best-loved cars. More versions of the Mini were available in New Zealand than anywhere else, and the launching of the iconic car in February 1960 was a larger-than-life event. In this lively and personal story, the author tracks the Mini's life in New Zealand, the connection between Kiwi racing driver Bruce McLaren and the birth of the Mini Cooper, the heady days of competition success in the Antipodes, the local assembly and marketing of the classic original car and the eventual development into the latest generation Mini for a new century.

Mini celebrates 60 amazing years of this iconic car, from its revolutionary

introduction to the popularity of its new-generation models. The first two-door Mini, introduced in 1959 and built until 2000, revolutionized automotive design with its innovative front-wheel-drive layout that made the car appear bigger on the inside than the outside. In 1999, the Mini was voted the second most influential car of the 20th century, behind the Ford Model T. Designed for British Motor Corporation (BMC) by Sir Alec Issigonis and manufactured in England, Australia, Spain, Belgium, Chile, Italy, Portugal, South Africa, Uruguay, Venezuela, and Yugoslavia, the Mini was as successful in competition as it was on the street, winning the Monte Carlo Rally four times from 1964 through 1967. Originally built by BMC, the Mini's later parent company, Rover, was

acquired by BMW in 1994. In 2000, BMW sold most of the Rover Group but retained the Mini brand. The last 5,387,862nd original Mini rolled off the production line in October 2000. In July 2001, BMW launched production of the new-generation of Mini which was soon joined by Countryman, Clubman, convertible, Cooper Works, and numerous special editions. Nearly 20 years later, the new Minis remain as popular as the original from 1959.

Anatomy of the Works Minis Haynes Publishing UK

The R-Series BMW MINI had a lot to live up to.

Launched in 2001, it was riding in the wake of the classic 1959-2000 Mini.

At the time, BMW were going to have to create something as special and innovative as its

longstanding predecessor in order to silence the naysayers. And they did.

Since its launch in 2001, BMW's modern MINI has become the pinnacle of small yet funky family cars in the premium small

(and sometimes not so small) car segment. Now in its third generation,

having unveiled the new F-Series in 2014, BMW

MINI offers 3- and 5-door hatchback models and convertibles, the estate Clubman, the five-door Countryman, the Coupe, the Roadster and the three-door crossover Paceman. MINI enthusiast and motoring journalist Sophie Williamson-Stothert explores the journey from 1959 to the present day, covering design and development of the new MINI, launch and reception by the press, its many model variations and special editions, and an owner's and buyer's guide.

Superbly illustrated with 170 colour photographs.

This edited volume gathers the proceedings of the Symposium GIS Ostrava 2016, the Rise of Big Spatial Data, held at the Technical University of Ostrava, Czech Republic, March 16–18, 2016.

Combining theoretical papers and applications by authors from around the globe, it summarises the latest research findings in the area of big spatial data and key problems related to its utilisation. Welcome to dawn of the big data era: though it's in sight, it isn't quite here yet. Big spatial data is characterised by three main features: volume beyond the limit of usual

geo-processing, velocity higher than that available using conventional processes, and variety, combining more diverse geodata sources than usual. The popular term denotes a situation in which one or more of these key properties reaches a point at which traditional methods for geodata collection, storage, processing, control, analysis, modelling, validation and visualisation fail to provide effective solutions. >Entering the era of big spatial data calls for finding solutions that address all “small data” issues that soon create “big data” troubles. Resilience for big spatial data means solving the heterogeneity of spatial data sources (in topics, purpose, completeness, guarantee, licensing, coverage etc.), large volumes (from gigabytes to terabytes and

more), undue complexity of geo-applications and systems (i.e. combination of standalone applications with web services, mobile platforms and sensor networks), neglected automation of geodata preparation (i.e. harmonisation, fusion), insufficient control of geodata collection and distribution processes (i.e. scarcity and poor quality of metadata and metadata systems), limited analytical tool capacity (i.e. domination of traditional causal-driven analysis), low visual system performance, inefficient knowledge-discovery techniques (for transformation of vast amounts of information into tiny and essential outputs) and much more. These trends are accelerating as sensors become more ubiquitous around the world. [MINI Cooper Service Manual](#)
