If you want your life to be significant and mean something, the best thing you should do is to impact other peoples lives. Let this book influence you to be an actor instead of an on-looker or spectator in life. The author wants the reader to study closely the people who were and still are successful and happy, so that the reader will realize the faith exercised by these people, the failures they endured and the complexity of the process they went through to have acquired their accomplishments. You do not have to have

the tangible possessions to know that you are wealthy, but if you feel and conduct yourself in the manner in which other successful and happy people conduct themselves, it will feel as if you do not even need the tangible things, because of your dominant state of your mental attitude towards success and happiness. Be afraid of giving up whenever faced with an impossible challenge, perhaps as far as your mental attitude is concerned. God is helping you, He is with you, He is guiding you and He will see you through. Dont be envious and jealous; rather admire people who are successful and happy in life. Life is a blessing.

The Report: South Africa 2012 Springer  
This book examines the detrimental impact of illicit financial flows on South Africa ' s development, political economy, and transformation in the 21st century. Over the years, illicit financial flows have led to the systematic looting and channelling away of South African resources, yet they are rarely studied by researchers looking to explain the country ' s underdevelopment and political

---

economy. This book looks across sectors, showing that illicit financial flows cut across all the key pillars of development, frustrating the betterment of peoples' lives in South Africa. Investigating the problem from a decolonial perspective, the book delves deep into the catastrophic impacts of illicit financial flows for people and the economy, discusses how the problem is being combatted, and ultimately suggests solutions for rebuilding social trust between people and the state. Making an important contribution to the decolonial debate, as well as to discussions of South Africa's political economy, this book will be of interest to researchers across African studies, global development, political science, law and corruption studies.

A new phase is emerging in the

relationship between energy and resource activities and the communities that are affected by them. Any energy or resource project - a mine, a wind farm, a dam for hydroelectricity, or a shale gas development - will involve a mix of impacts and benefits for communities. For many years, the law has mediated impacts on communities and provided for the distribution of financial benefits. Now, there is growing awareness of the need to consider not only a wider range of costs and benefits for communities from energy and resource projects, but also the effects on communities at multiple scales and in complex ways. Sharing the costs and benefits of natural resource activity has now become a legal requirement for energy and resource projects operating in many jurisdictions, particularly in developing countries. This book uses cases studies from across the globe to examine the emergence of such legal measures, their advantages and disadvantages, and the improvements that may be feasible in the legal frameworks used to distribute the costs and benefits of energy and resources activity. The book has three parts: Part I considers general legal and conceptual frameworks; Part II addresses the mechanisms available to distribute costs and benefits; and Part III considers the role of public engagement and participation in the sharing of the costs and benefits from energy and resource projects.

Educating the Engineer of 2020 is grounded by the observations, questions, and conclusions presented in the best-selling book *The Engineer of 2020: Visions of Engineering in the New Century*. This new book offers recommendations on how to

---

enrich and broaden engineering education so graduates are better prepared to work in a constantly changing global economy. It notes the importance of improving recruitment and retention of students and making the learning experience more meaningful to them. It also discusses the value of considering changes in engineering education in the broader context of enhancing the status of the engineering profession and improving the public understanding of engineering. Although certain basics of engineering will not change in the future, the explosion of knowledge, the global economy, and the way engineers work will reflect an ongoing evolution. If the United States is to maintain its economic leadership and be able to sustain its share of high-technology jobs, it must prepare for this wave of change.

Mining Engineering is an emerging branch of engineering focusing upon the extraction and processing of minerals from their natural state. It is intertwined with other engineering disciplines like geotechnical engineering, metallurgy and mineral science. It concerns not only the production of minerals but the sustainability of resources as well. The book compiles the diverse practices of mining simulation and mining equipment. It takes into account the exploration, discovery and determination of minerals through different techniques. This book covers various methodologies and models involved in the study of mining engineering collated by eminent industry experts and academicians from across the globe.

Prospective homeschoolers are parents looking for an alternative to the mainstream educational system for their offspring. But homeschooling children at high school level strikes fear into even the most dedicated of

homeschoolers. They need information and answers to their questions. And with the current educational and unemployment problems in South Africa, young people need clear direction and guidance to help them achieve their goals. In addition to exploring the popular ways to gaining a recognised matric certificate outside the formal school system, Homeschooling High School also challenges readers to rethink their values, particularly the value they place on certification, and to consider some unconventional or alternative paths to success. In a clearly presented format, the book includes advice on legal matters, identifying appropriate courses, sourcing study material, tips on entrepreneurship, financing tertiary studies and the testimonies of successful homeschooled graduates. Homeschooling High School is a comprehensive guide to plotting a path through high school and beyond.

Principles and Practice in Mining Engineering is an up-to-date introduction to the scientific principles and technological practices of mining engineering. This book introduces the processes involved in surface and underground mining, and covers many topical issues common to mining engineering practices, including mining and quarrying methods,

environmental protection measures, finance and investment, policy and mining education. Recent technology and innovations (technovations) in the mining and mineral industry, including digital mines, IoT/IIoT, AI, and machine learning, are also discussed. Seven case studies of mines and mining operation from different parts of the globe are included to demonstrate how various minerals, including lithium, potash, copper, gold, uranium, and coal, are extracted. These case studies are written by experienced industry professionals working for reputable companies. Suggested readings, references, websites, and conversion tables for mining engineering applications are included at the end of the book for the reader's reference. Principles and Practice in Mining Engineering gives practical, real-world knowledge to the mining workforce engaged in the mining and minerals industry globally. This book is also aimed at students, scientists, academics, NGOs, and professionals just entering the mining industry.

In this book Helen Paynter offers a radical re-evaluation of the central section of Kings. Reading with attention to the literary devices of carnivalization and mirroring, she demonstrates that it contains a florid satire on kings, prophets and nations. Building on the work of humorists, literary critics and biblical scholars, the author constructs diagnostic criteria for carnivalization (seriocomedy), and identifies an abundance of these features within the Elijah/Elisha and Aram narratives, showing how literary mirroring further enhances their satirical effect. This book will be of particular interest to students and scholars concerned with the Hebrew Bible as literature but will be

valued by those who favour more historical approaches for its insights into the Hebrew text.

This book asks how governments in Africa can use evidence to improve their policies and programmes, and ultimately, to achieve positive change for their citizens. Looking at different evidence sources across a range of contexts, the book brings policy makers and researchers together to uncover what does and doesn't work and why. Case studies are drawn from five countries and the ECOWAS (west African) region, and a range of sectors from education, wildlife, sanitation, through to government procurement processes. The book is supported by a range of policy briefs and videos intended to be both practical and critically rigorous. It uses evidence sources such as evaluations, research synthesis and citizen engagement to show how these cases succeeded in informing policy and practice. The voices of policy makers are key to the book, ensuring that the examples deployed are useful to practitioners and researchers alike. This innovative book will be perfect for policy makers, practitioners in government and civil society, and researchers and academics with an interest in how evidence can be used to support policy making in Africa. psychological lens to understanding the systems embedded within the socially constructed aspects of our intersectional identities. Offering a philosophical understanding of supremacy and its meaning within counselling and psychotherapy, the book examines just how and why supremacy exists, some of the psychology behind supremacy, and how it impacts clients, training, and practice. Chapters offer means and ways of observing and challenging systems of supremacy as they may appear within counselling and psychotherapy relationships. Featured psychotherapeutic case studies detail stories from participants who have endured the painful experience of being involved in the power structures of supremacy. A must read for psychotherapists and counsellors, this book will also appeal to psychologists, social workers, qualitative and quantitative researchers, and anyone else interested in further deepening their understanding of supremacy, privilege, and otherness.

Although Dr. Patrick Mbaya's illness caused a lot of distress and nearly took his life, the emotional symptoms of the depression he developed helped him understand and empathize with patients and how they feel when they become ill. In *My Brain is Out of Control*, Mbaya, fifty-five and at the peak of his career, shares a personal story of how he suffered from a brain infection in 2010 that caused loss of speech, right-sided weakness, and subsequent depression. He tells how he also dealt with the antibiotic complications of low white cell count and hepatitis. He narrates his experiences as a patient, the neurological and psychiatric complications he encountered, how he coped, and his journey to recovery. Presenting a personal perspective of Mbaya's illness from the other side of the bed, *My Brain is Out of Control*, offers profound insight into battling a serious illness.

#### The Athenaeum BRILL

A beginning text and elementary reference book in mining engineering which adopts both a quantitative and a numerical approach. Provides in-depth treatment of the applications of mining engineering while reinforcing material with clear, complete analyses of special topics as well as numerical examples and problems. Initial chapters are devoted to fundamentals, explaining the four stages of mining -- prospecting, exploration, development, exploitation-- and the unit operations of mining. The text continues with coverage of surface mining and underground mining. Highlights novel methods and provides case studies, answers to selected problems, extensive references and bibliography, and both English and SI or metric units.

To date, I have never piloted a biplane, but for many nights before I had any thought of writing this book, I dreamed I was sitting in the cockpit of a black biplane. Although I could not see the wings, I just somehow knew it was one. There was a tiny half-moon windshield, an instrument panel with some gauges, and a joystick in front of me. I could feel the wind on my face, icy cold in my bones, vibrations and movements of the aircraft through the seat of my pants, and a hollow feeling in the pit of my stomach. A few nights later, the silhouetted head and shoulders of a young man started to haunt my dreams instead. Every time I dreamed of him, his face became a little clearer, and I eventually saw he was wearing old-fashioned

---

flying goggles and a leather cap: everything was sepia-colored like an old-fashioned photograph or daguerreotype plate. Silent at first, eventually he said, a trifle forlornly, but not bitterly, Please, ask them not to forget us. What we fought and died for, was it for nothing?

"This text is a valuable new resource that we recommend for all of our professionals and are proud to incorporate as part of our AFC® certification program. With expertise representing the breadth and depth of the financial counseling profession, the content in this text provides you with a rigorous foundation of knowledge, considers critical theoretical models, and explores foundational skills of communication, self-awareness, and bias. This type of comprehensive approach aligns with our mission and vision—providing you with the foundational knowledge to meet clients where they are across the financial life-cycle and impact long-term financial capability." -Rebecca Wiggins, Executive Director, AFCPE® (Association for Financial Counseling and Planning Education®) This timely volume presents a comprehensive overview of financial counseling skills in accessible, practical detail for readers throughout the career span. Expert financial counselors, educators, and researchers refer to classic and current theories for up-to-date instruction on building long-term client competence, working with clients of diverse backgrounds, addressing problem financial behavior, and approaching sensitive topics. From these core components, readers have a choice of integrated frameworks for guiding clients in critical areas of financial decision-making. This essential work:

- Offers an introduction to financial counseling as a practice and profession
- Discusses the challenges of working in financial counseling
- Explores the elements of the client/counselor relationship
- Compares delivery systems and practice models
- Features effective tools and

- resources used in financial counseling
- Encourages counselor ethics, preparedness, and self-awareness
- A standout in professional development references, *Financial Counseling* equips students and new professionals to better understand this demanding field, and offers seasoned veterans a robust refresher course in current best practices.
