I am building a 1" Minnie and after assembling the cylinder to the boiler have tried to run it in compressed air with no success. I have tested the cylinder away from the boiler and it seemed ok. But after assembly on the boiler it did not work. I would appreciate any suggestion. suctionhose Statesman.

C/I is reasonably cheap, machines  
very well and as I understand it a  
good bearing material which I would  
have thought fine for a slow moving  
vehicle such as a traction engine. A  
picture below of a test bearing I  
machined for the main axle. Sorry  
to intrude into your thread Brian,  
your Minnie looks excellent by the  
way very nice indeed. henryb

March 7, 2017 Here we have a nice little  
1 scale 'Minnie' traction engine. We've  
had this one on the airline and it runs  
nicely in both forward and reverse. The  
boiler too is silver soldered copper, very  
neatly done, and has been given a full  
hydraulic shell test, so can be given a full  
4 year hydraulic certificate.
