This book provides a comprehensive, in-depth review of our current understanding of the growth of blood vessels within the eye. Novel therapeutic strategies for the treatment of ocular angiogenesis are discussed, as are the unique challenges presented by delivery of drugs to the eye. The book emphasizes basic principles rather than specific experimental results, although recently acquired data is frequently cited to illustrate points of broader theoretical significance.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration?s three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. The progressive ageing of the general population and the consequent increase of the number of old people has made the typical medical problems of aged people more frequently observed, and particularly the problems related to the ageing brain. This new book is an updated overview of relevant aspects of cognitive decline associated with ageing. Within the wide landscape of brain ageing the authors reconsider the role of the main predisposing factors and risk factors on the development of various form of mental decline, from mild cognitive impairment to dementia. The strength of this book is the large, updated overview of the most recent data of scientific literature regarding the role of genetic, metabolic and environmental factors on the predisposition and onset of cognitive decline. Particular attention is paid to the dietary micro- and macronutrients and to their possible role in the pathogenesis of the various form of dementigen disorders.

Autocar Random House Books for Young Readers

The bedtime rituals of little diggers and dump trucks at a construction site should be quite familar to kids saying goodnight. Young readers will identify with fire engines, tractors and monster trucks as the vehicles ask for one more story while their mommy trucks tuck them in, and their daddy trucks sing a goodnight song. Children who can't get enough of trucks will love Brianna Caplan Sayres things-that-go bedtime story.

There’s something in the earth deep below Elise Kavanagh’s territory. A shadow is falling upon local demons to devour their flesh and harvest their souls. And it’s coming for Elise next. The Union has an easy way out. They want to send Elise into hiding again with her former partner, James Faulkner. All she has to do is surrender the territory and trust that they can protect the ethereal ruins, the dark gate, and the city she’s come to know as home. Greater powers have other plans for Elise and her fabled power as Godslayer-plans that mean surrendering her life and blood to the most powerful demon

alive. But if she descends, there’s no turning back. Once she gazes into the abyss, it will gaze back into her...and Elise will be damned forever.

Metals Reference Book presents a convenient summary of data concerning to metallurgy. It discusses the guidance for dealing with laboratory accidents. It addresses the radioactive isotopes and radiation sources. Some of the topics covered in the book are the x-ray crystallography; excitation of x-rays; rotating crystal methods; powder methods; the wide angle method; the Laue method; the intensity of x-ray reflections; derivation of accurate unit cell dimensions in crystals; and the schoenflies system of point- and space-group notation. The Hermann-Mauguin system of point- and space-group notation is fully covered. The structures of metals, metalloids, and there compounds is discussed in detail. The text describes in depth the metallurgically important minerals. The metallic systems of unlimited mutual solubility are presented completely. A chapter is devoted to the respiratory syncytial virus. Another section focuses on the physical properties of molten salts. The book can provide useful information to mineralogists, chemists, students, and researchers.

This book provides comprehensive and definitive coverage of the current understanding of the structure and function of the exocrine pancreas. While emphasis is on normal physiology, the relevant cell biological, developmental and biochemical information is also provided. Where appropriate, chapters also include material on functional changes in pancreatitis. All chapters are fully referenced and provide up to date information. The book has been overseen and published by the American Pancreatic Association with Fred S. Gorelick and John A. Williams as Editors. It includes 26 chapters written by an international group of authorities; completed chapters are also presented in open access format on the Pancreapedia (www.pancreapedia.org). The book contains full-color images and summary diagrams that enhance readability and extend the detail provided in the text. The Pancreas: Biology and Physiology is divided into four sections: Pancreatic Exocrine Structure and Function Anatomy, Bioenergetics, Cytoskeleton, Intracellular Signaling Acinar Cells Digestive enzyme synthesis, intracellular transport, Zymogen granules, Exocytosis Exocrine Pancreas Integrative Responses Hormonal and Neural Control of Protein and Fluid Secretion, Molecular mechanisms of fluid and bicarbonate secretion, regulation of growth and regeneration Pancreatic Islet and Stellate Cell Structure and Function Structure and vasculature of islets, regulation of islet secretion, Stellate Cells in health and disease The book is designed to be a reference book for pancreas researchers but its clear and readable text will appeal to teachers, students and all individuals interested in the exocrine pancreas.

Climate Change Impact on Livestock: Adaptation and Mitigation ????? ???????

This volume addresses in detail both livestock’s role in climate change and the impacts of climate change on livestock production and reproduction. Apart from these cardinal principles of climate change and livestock production, this volume also examines the various strategies used to mitigate livestock-related GHG emissions, and those which can reduce the impacts of climate change on livestock production and reproduction. Presenting information and case studies collected and analyzed by professionals working in diversified ecological zones, the book explores the influence of climate change on livestock production across the globe. The most

significant feature of this book is that it addresses in detail the different adaptation strategies and identifies targets for different stakeholders in connection with climate change and livestock production. Further, it puts forward development plans that will allow the livestock industries to cope with current climate changes and strategies that will mitigate the effects by 2025. Lastly, it provides researchers and policymakers several researchable priorities to help develop economically viable solutions for livestock production with less GHG emissions, promoting a cleaner environment in which human beings and livestock can live in harmony without adverse effects on productivity. Given that livestock production systems are sensitive to climate change and at the same are themselves a contributor to the phenomenon, climate change has the potential to pose an increasingly formidable challenge to the development of the livestock sector. However, there is a dearth of scientific information on adapting livestock production to the changing climate; as such, well-founded reference material on sustaining livestock production systems under the changing climate scenarios in different agro-ecological zones of the world is essential. By methodically and extensively addressing all aspects of climate change and livestock production, this volume offers a valuable tool for understanding the hidden intricacies of climatic stress and its influence on livestock production.
