This is the first book-length study of identity constructions in relation to English as a contact language in advertising of non-English-speaking countries through a critical and interpretive lens. Instead of simply presuming the role of the English language may have in constructing identities within the multimodal advertisement, this book aims to explore ethnographically the ideological underpinnings of identity constructions in the context of local politics of English. It studies the varying degrees of the contribution of the English language and its possible roles in bilingual advertising, unravels the ideological dimensions of the language as well as identity and explains the sociocultural forms and meanings of identity. To this end, it develops a new critical-cognitive approach, bringing together recent advances in English as a global language, critical sociolinguistics, multilingual studies and multimodal discourse analysis. By delving into the cognitive process of identity constructions, it provides an evidence-based account of the roles of English, and it illustrates the interconnections between identities and local politics of English. This interdisciplinary book will be of interest to scholars and students in bilingualism, multilingualism, discourse analysis, English as a global language, multimodality, advertising and marketing.

This holistic book is an invaluable reference for addressing various practical challenges in architecting and engineering Intelligent IoT and eHealth solutions for industry practitioners, academic and researchers, as well as for engineers involved in product development. The first part provides a comprehensive guide to fundamentals, applications, challenges, technical and economic benefits, and promises of the Internet of Things using examples of real-world applications. It also addresses all important aspects of designing and engineering cutting-edge IoT solutions using a cross-layer approach from device to fog, and cloud covering standards, protocols, design principles, reference architectures, as well as all the underlying technologies, pillars, and components such as embedded systems, network, cloud computing, data storage, data processing, big data analytics, machine learning, distributed ledger technologies, and security. In addition, it discusses the effects of Intelligent IoT, which are reflected in new business models and digital transformation. The second part provides an insightful guide to the design and deployment of IoT solutions for smart healthcare as one of the most important applications of IoT. Therefore, the second part targets smart healthcare-wearable sensors, body area sensors, advanced pervasive healthcare systems, and big data analytics that are aimed at providing connected health interventions to individuals for healthier lifestyles.

The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the "2030 Agenda for Sustainable Development". On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN

Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 15, namely "Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss" and contains the description of a range of terms, which allow a better understanding and foster knowledge. Concretely, the defined targets are: Ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in line with obligations under international agreements Promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally Combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world Ensure the conservation of mountain ecosystems, including their biodiversity, in order to enhance their capacity to provide benefits that are essential for sustainable development Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity and protect and prevent the extinction of threatened species Promote fair and equitable sharing of the benefits arising from the utilization of genetic resources and promote appropriate access to such resources, as internationally agreed Take urgent action to end poaching and trafficking of protected species of flora and fauna and address both demand and supply of illegal wildlife products Introduce measures to prevent the introduction and significantly Reduce the impact of invasive alien species on land and water ecosystems and control or eradicate the priority species Integrate ecosystem and biodiversity values into national and local planning, development processes, poverty reduction strategies and accounts Mobilize and significantly increase financial resources from all sources to conserve and sustainably use biodiversity and ecosystems Mobilize

significant resources from all sources and at all levels to finance sustainable forest management and provide adequate incentives to developing countries to advance such management, including for conservation and reforestation Enhance global support for efforts to combat poaching and trafficking of protected species, including by increasing the capacity of local communities to pursue sustainable livelihood opportunities Editorial Board Alexandra Aragão, Desalegn Yayeh Ayal, Ayansina Ayanlade, Anabela Marisa Azul, Adriana Consorte-McCrea, Muhammad Farooq, Ana Catarina Luz, María P. The Geospatial Web (aka the GeoWeb) is a rapidly evolving Web 2.0 market of innovative data and software applications--including location-based services, social software, and even augmented reality--for both the web and mobile devices. Propelled by the new location-aware iPhone, the GeoWeb is hurtling into the mainstream. This special issue lays out the new generation of geo products and services, identify the major players, and show how your business can leverage the power of Where 2.0.

This comprehensive work takes you on a personal tour of the universe using nothing more than a pair of binoculars. More comprehensive than any book currently available, it starts with Earth's nearest neighbor, the moon, and then goes on to explore each planet in the solar system, asteroids, meteors, comets and the sun. Following this, the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar. The final chapter includes a detailed atlas of deep-sky objects visible through binoculars. The appendices include guidance on how to buy, care for and maintain astronomical binoculars, tips and hints on using them, and detailed information on several home-made binocular mounts.

Dodging Elephants tells the story of how a contented teenage soda jerk from Tahoka, Texas, with no plan for his future, found his way to higher education, landed a research job at Texas Instruments, and, over three decades, helped move that company from a small, oil-searching firm to a worldwide electronics giant. From the start J. Fred Bucy was a tireless, driven

manager who turned failures into successes. Taking on TI's government equipment division in 1963, he successfully championed ingenious new designs. In 1967 he moved to the company's volatile, ever-expanding semiconductor division, establishing factories worldwide. Meanwhile, he had become an influential advisor on U.S. government export regulation. By 1976, when TI was competing in the consumer market, he was the company's president. Bucy left TI in 1985 after a brief term as CEO. His autobiography is rich in anecdotes and unsparingly honest. Growing up on the rural South Plains of Texas in the years of the Great Depression, Dust Bowl, and World War II, Fred Bucy learned the value of self-reliance and hard work. He seemed headed for a farming career when his life took an abrupt turn. Against substantial odds, and with a family to support, he earned two degrees in Physics and, in 1953, joined a young but promising company, Texas Instruments Incorporated. For the next thirty years he played a major role in TI's phenomenal growth and history-making innovation, moving steadily upward, becoming TI's president in 1976 and its CEO in 1984. It was a tough climb. Along the way he successfully managed a variety of brilliant, often endangered projects including digital computers, sophisticated weaponry, and complex semiconductors, playing a crucial role in the explosive, worldwide expansion of microchip technology. All forms of tourism have impacts on the natural environment. The impacts of ecotourism tend to be concentrated in areas of the highest conservation value, hence the need to manage and minimize these. This comprehensive text considers the impact of off-road vehicles, recreational boats and activities such as hiking and camping on destination areas, as well as impacts particular to specific ecosystems such as marine, polar and mountain environments. It incorporates reviews of extensively studied impacts by well-known experts as well as recent research. Now in paperback, this book will be an essential resource for tourism students, as well as researchers and industry practitioners.

Binocular Highlights is a tour of 96 different celestial sights ? from softly glowing clouds of gas and dust to unusual stars, clumps of stars, and vast star cities (galaxies) ? all visible in binoculars. Each object is plotted on a detailed, easy-to-use star map, and most of these sights can be found even in a light-polluted sky. Also included are four seasonal all-sky charts that help locate each highlight. You don't need fancy or expensive equipment to enjoy the wonders of the night sky. In fact, as even experienced star gazers know, to go beyond the naked-eye sky and delve deep into the universe, all you need are binoculars ? even the ones hanging unused in your closet. If you don't own any, *Binocular Highlights* explains what to look for when choosing binoculars for star gazing and provides observing tips for users of these portable and versatile mini-telescopes. Spiral-bound with readable paper spine, full color throughout.

People go traveling for two reasons: because they are searching for something, or they are running from something. Katie's world is shattered by the news that her headstrong and bohemian younger sister, Mia, has been found dead at the bottom of a cliff in Bali. The authorities say that Mia jumped—that her death was a suicide. Although they'd hardly spoken to each other since Mia suddenly left on an around-the-world trip six months earlier, Katie refuses to accept that her sister would have taken her own life. Distraught that they never made peace, Katie leaves her orderly, sheltered life in London behind and embarks on a journey to find out the truth. With only the entries in Mia's travel journal as her guide, Katie retraces the last few months of her sister's life and—page by page, country by country—begins to uncover the mystery surrounding her death. . . . Weaving together the exotic settings and suspenseful twists of Alex Garland's *The Beach* with a powerful tale of familial love in the spirit of Rosamund Lupton's *Sister, Swimming at Night* is a fast-paced, accomplished, and gripping debut

novel of secrets, loss, and forgiveness.

Carnivores are the focus of intense attention and resources in conservation biology. It is often argued that, because carnivores are at the top of the food chain, if they are protected, then other taxa will also be afforded adequate protection. Carnivores are also charismatic and compete with humans for dwindling space and environmental resources. In the past 10 years, theoretical and empirical studies on carnivores have developed very quickly. This volume reviews and summarises the current state of the field, describes limitations and opportunities for carnivore conservation, and offers a conceptual framework for future research and applied management. As such it will be of interest to students and researchers of conservation biology, mammalogy, animal behaviour, ecology and evolution.

The concept of content delivery (also known as content distribution) is becoming increasingly important due to rapidly growing demands for efficient distribution and fast access of information in the Internet. Content delivery is very broad and comprehensive in that the contents for distribution cover a wide range of types with significantly different characteristics and performance concerns, including HTML documents, images, multimedia streams, database tables, and dynamically generated contents. Moreover, to facilitate ubiquitous information access, the network architectures and hardware devices also vary widely. They range from broadband wired/fixed networks to bandwidth-constrained wireless/mobile networks, and from powerful workstations/PCs to personal digital assistants (PDAs) and cellular phones with limited processing and display capabilities. All these levels of diversity are introducing numerous challenges on content delivery technologies. It is desirable to deliver contents in their best quality based on the nature of the contents, network connections and client devices. This book aims at providing a snapshot of the state-of-the-art research and development activities

on web content delivery and laying the foundations for future web applications. The book focuses on four main areas: (1) web content delivery; (2) dynamic web content; (3) streaming media delivery; and (4) ubiquitous web access. It consists of 17 chapters written by leading experts in the field. The book is designed for a professional audience including academic researchers and industrial practitioners who are interested in the most recent research and development activities on web content delivery.
