Explore the everyday miracle of the microscopic world With spectacular macro photography and microscope images, this ebook reveals a hidden, living world full of intricate structures beyond the naked eye. Included are the tiniest insects and spiders; but looking deeper, you will discover truly microscopic creatures--even bacteria and viruses. Earth is home to more microbes, and more different types of microbes, than any other living organism. Bacteria on Earth outweigh humans by 1,100 to 1; and without them, all world ecosystems would collapse. This ebook reveals this vital, unseen realm, but it includes large life-forms too, in extreme close-up, so that you can wonder at the beauty of a pollen grain, a butterfly egg, the spore of a fungus, and the nerve cell of a human. The spectacular imagery in *Micro Life* exploits cutting-edge technology, such as focus-stacked macro photographs, as well as micrographs (microscope images) including scanning electron micrographs. Illustrations nearby explain the science--from the workings of an insect's eye to how a plant "breathes" through its leaves. The biology builds into a reference on how life works--and how all organisms, however small, solve the basic problems of movement, reproduction, energy, communication, and defense. *Micro Life* is a beautiful and surprising look at the natural world.

Another history pageturner from the authors of the #1 bestsellers *George Washington's Secret Six* and *Thomas Jefferson and the Tripoli Pirates*. The War of 1812 saw America threatened on every side. Encouraged by the British, Indian tribes attacked settlers in the West, while the Royal Navy terrorized the coasts. By mid-1814, President James Madison's generals had lost control of the war in the North, losing battles in Canada. Then British troops set the White House ablaze, and a feeling of hopelessness spread across the

country. Into this dire situation stepped Major General Andrew Jackson. A native of Tennessee who had witnessed the horrors of the Revolutionary War and Indian attacks, he was glad America had finally decided to confront repeated British aggression. But he feared that President Madison's men were overlooking the most important target of all: New Orleans. If the British conquered New Orleans, they would control the mouth of the Mississippi River, cutting Americans off from that essential trade route and threatening the previous decade's Louisiana Purchase. The new nation's dreams of western expansion would be crushed before they really got off the ground. So Jackson had to convince President Madison and his War Department to take him seriously, even though he wasn't one of the Virginians and New Englanders who dominated the government. He had to assemble a coalition of frontier militiamen, French-speaking Louisianans, Cherokee and Choctaw Indians, freed slaves, and even some pirates. And he had to defeat the most powerful military force in the world—in the confusing terrain of the Louisiana bayous. In short, Jackson needed a miracle. The local Ursuline nuns set to work praying for his outnumbered troops. And so the Americans, driven by patriotism and protected by prayer, began the battle that would shape our young nation's destiny. As they did in their two previous bestsellers, *Kilmeade* and *Yaeger* make history come alive with a riveting true story that will keep you turning the pages. You'll finish with a new understanding of one of our greatest generals and a renewed appreciation for the brave men who fought so that America could one day stretch "from sea to shining sea."

An abundantly illustrated narrative that draws from the history of art, science, technology, artificial intelligence, psychology, religion, and conservation in telling the extraordinary story of a Renaissance robot that prays. This volume tells the singular story of an uncanny, rare object at the cusp of art and science: a 450-year-old automaton known as “the monk.” The walking, gesticulating figure of a friar, in the collection of the Smithsonian Institution’s National Museum of American History, is among the earliest extant ancestors of the self-propelled robot.

According to legend connected to the court of Philip II of Spain, the monk represents a portrait of Diego de Alcalá, a humble Franciscan lay brother whose holy corpse was said to be agent to the miraculous cure of Spain’s crown prince as he lay dying in 1562. In tracking the origins of the monk and its legend, the authors visited archives, libraries, and museums across the United States and Europe, probing the paradox of a mechanical object performing an apparently spiritual act. They identified seven kindred automata from the same period, which, they argue, form a paradigmatic class of walking “prime movers,” unprecedented in their combination of visual and functional realism. While most of the literature on automata focuses on the Enlightenment, this enthralling narrative journeys back to the late Renaissance, when clockwork machinery was entirely new, foretelling the evolution of artificial life to come. “This daughter of Mary Shelley delights and excites the border between story and science.” —Samantha Hunt “A novel about what we want and also what we can’t escape.” —Allegra Hyde “A haunting chord of a novel that will hang in the air long after you turn the final page.” —Tiffany Tsao “Reads like a documentary retold as a dream retold as a mystery novel. What a wise, good-hearted debut!” —Kate Bernheimer After nearly drowning, eight-year-old Maeve Wilhelm falls into a strange comatose state. As years pass, it becomes clear that Maeve is not physically aging. A wide cast of characters finds themselves pulled toward Maeve, each believing that her mysterious “sleep” holds the answers to their life’s most pressing questions: Kevin Marks, a museum owner obsessed with preservation; Monique Gray, a refugee and performance artist; Lionel Wilhelm, an entomologist who dreamed of being an astrophysicist; and Evangeline Wilhelm, Maeve’s identical twin. As Maeve remains asleep, the characters grapple with a mysterious new technology and medical advances that promise to ease anxiety and end pain, but instead cause devastating side

effects. Weaving together speculative elements and classic fables, and exploring urgent issues from the opioid epidemic to the hazards of biotech to the obsession with self-improvement and remaining forever young, Rebekah Bergman’s *The Museum of Human History* is a brilliant and fascinating novel about how time shapes us, asking what—if anything—we would be without it.

Miracle at Belleau Wood Metropolitan Museum of Art How the billionaire owners of Hobby Lobby are spending hundreds of millions of dollars to make America a “Bible nation” The Greens of Oklahoma City—the billionaire owners of the Hobby Lobby chain of craft stores—are spending hundreds of millions of dollars in an ambitious effort to increase the Bible’s influence on American society. In *Bible Nation*, Candida Moss and Joel Baden provide the first in-depth investigative account of the Greens’ sweeping Bible projects. Moss and Baden tell the story of the Greens’ efforts to place a Bible curriculum in public schools; their rapid acquisition of an unparalleled collection of biblical antiquities; their creation of a closely controlled group of scholars to study and promote the collection; and their construction of a \$500 million Museum of the Bible in Washington, D.C. Revealing how all these initiatives promote a very particular set of beliefs about the Bible, the book raises serious questions about the trade in biblical antiquities, the integrity of academic research, and the place of private belief in public life.

Through a series of case studies, this third volume in the *Earth* series deals with the technological constraints and innovations that enabled societies to survive and thrive across a range of environmental conditions. The contributions are structured into three sections to draw out particular commonalities and contrasts in the choices made by pre-industrial communities in the construction of varied landscapes and cultural heritage: *Landnam*, from the Old Norse for “taking of land”, deals with colonization, including the drivers and processes through which colonizers developed an understanding of the productive potential and limitations of their new lands. *Fields and field systems*: Field-walls are a distinctive and apparently

timeless characteristic of many pre-industrial farming landscapes but they present many the challenges to their study, such as the effects of plowing, abandonment and land-use change and of urban development in fertile lowland zones which may eradicate, reduce or conceal past systems of land-use and division. The importance of indirect and proxy evidence is illustrated and the value of interdisciplinary and modeling approaches emphasized.

Agro-pastoralism: focuses on the complex 'time-space adaptations' devised for managing cultivation and livestock production, particularly the need to prevent stock incursions into arable fields during the growing season whilst making effective use of seasonal grazing resources. The contributions focus on mountainous areas, where temporary migrations, in the form of transhumance, provided access to a diversity of resources based around seasonal constraints on their availability and productivity.

In *Long Road to Hard Truth: The 100 Year Mission to Create the National Museum of African American History and Culture*, Robert L. Wilkins tells the story of how his curiosity about why there wasn't a national museum dedicated to African American history and culture became an obsession—eventually leading him to quit his job as an attorney when his wife was seven months pregnant with their second child, and make it his mission to help the museum become a reality. *Long Road to Hard Truth* chronicles the early history, when staunch advocates sought to create a monument for Black soldiers fifty years after the end of the Civil War and in response to the pervasive indignities of the time, including lynching, Jim Crow segregation, and the slander of the racist film *Birth of a Nation*. The movement soon evolved to envision creating a national museum, and Wilkins follows the endless obstacles through the decades, culminating in his honor of becoming a member of the Presidential Commission that wrote the plan for creating the museum and how, with support of both Black and White Democrats and Republicans, Congress finally authorized the museum. In September 2016, exactly 100 years after the movement to create it began, the Smithsonian will open the National Museum of African American History and Culture. The book's title is inspired in part by James Baldwin, who testified in Congress in 1968 that "My history... contains the truth about America. It is going to be hard to teach it." *Long Road to Hard Truth* concludes that this journey took 100 years because many in America are unwilling to confront the history of America's legacy of slavery and discrimination, and that the only reason this museum finally became a reality is that an unlikely, bipartisan coalition of political leaders had the courage and wisdom to declare that America could not, and should not, continue to evade the hard truth.

When Kansas City's Nelson-Atkins Museum of Art opened to the public in 1933, it was viewed as a miracle, an oasis of culture in a Midwestern town whose image was still largely one of cowboys and steaks. In an engaging style, Kristie Wolferman tells the history of the Nelson-Atkins from its founding to the present day, a fascinating combination of people, events, and circumstances that culminated in an art museum that now holds its own among the finest in

the world. Wolferman begins by relaying how the trustees of the estates of the reclusive widow Mary Atkins and the family of Kansas City Star newspaper editor William Rockhill Nelson joined forces to establish a museum from scratch, then goes on to consider all of the highly talented people who directed and staffed the Nelson-Atkins along the way, their efforts resulting in many bold innovations, among them new collections, grounds, and educational programs and offerings. With 100 color and black and white photographs, this book will be treasured by all who love and admire this remarkable institution, one that attracts half a million visitors—from across the city, state, nation, and world—each year. This is a co-publication of the University of Missouri Press and the Nelson-Atkins Museum of Art.

*Madonnas and Miracles* exposes a hidden world of religious devotion in the Italian Renaissance home. Challenging the idea of the Renaissance as an age of increasing worldliness, it shows how religion remained a powerful force that coloured every aspect of daily life. Across the length and breadth of Italy, houses were filled with decorative objects and works of art with spiritual significance, designed to aid members of the family in their devotional lives. A wide range of religious activities, from routine prayers to extraordinary experiences such as miracles and exorcisms, took place within the home, where they were adapted to key moments in the life-cycle, including birth, marriage, sickness and death. This illustrated publication explores a variety of devotional objects and images, from luxury items to everyday household goods. Bringing together jewellery and ceramics, manuscripts and printed books, sculpture and paintings, the book offers a vivid encounter with Renaissance spirituality and domesticity. The result is a new vision of a period in which the material world was charged with sacred power. Exhibition: Fitzwilliam Museum, Cambridge, UK (Spring 2017).
