Inside the secret world of tennis court-siding. Brad Hutchins has been living a young bloke ’ s dream: getting paid to travel the world and watch sport. Sitting court-side on the pro tennis circuit, he uses his phone to transmit results to a gambling syndicate, taking advantage of the time delay in TV broadcasts to beat other online punters to the big pay-offs. His stories from life on the road capture the adventures and mishaps that come with following the world ’ s best tennis players and partying in a new country every week. But like card counters in casinos, court-siders are despised by the tennis establishment. The more time Brad spends at tournaments, the harder it becomes for him to evade the security guards who are hell-bent on ejecting him from matches. The resulting cat-and-mouse chases will appeal to anyone who loves the roguish spirit of The Wolf of Wall Street or Catch Me If You Can. Brad Hutchins spent his youth playing sports and travelling the world, before finding his dream job as a tennis trader. Born and raised in Brisbane, he has lived and worked in the UK and Canada, and now teaches primary school students on the Gold Coast. Game, Set, Cash! is his first book.

A professional-looking finish is the dream of most woodworkers. One way to achieve it is through modern spray finishing. Spray finishing is a lot less trouble than it used to be - recent technological breakthroughs have made a previously messy and expensive process safer, easier and cheaper. The development of water-based finishes and HVLP spray systems has put spray finishing within the grasp of any small-shop woodworker willing to learn the technique and make a modest investment in equipment. Andy Charron, a professional woodworker, has been experimenting with spray finishes for some years and has experience with a number of systems. He has put this expertise into a comprehensive volume that explains the entire process. Charron describes how each system works and how to choose the system that's right for the kind of work you do - from guns and spray booths to compressors, turbines, air lines, filters and safety equipment. You'll also learn how to work with lacquers, crosslinked finishes, shellac, polyurethane and water-based finishes; how to color, stain and tone the wood; how to spray contact cement; and how to clean your equipment when you're done. A troubleshooting chart at the end of the book will help you identify and solve problems at a glance.

A teenager struggles through physical loss to the start of acceptance in an absorbing, artful novel at once honest and insightful, wrenching and redemptive. (Age 12 and up) On a sunny day in June, at the beach with her mom and brother, fifteen-year-old Jane Arrowood went for a swim. And then everything -- absolutely everything -- changed. Now she ’ s counting down the days until she returns to school with her fake arm, where she knows kids will whisper, "That ’ s her -- that ’ s Shark Girl," as she passes. In the meantime there are only questions: Why did this happen? Why her? What about her art? What about her life? In this striking first novel, Kelly Bingham uses poems, letters, telephone conversations, and newspaper clippings to look unflinchingly at what it ’ s like to lose part of yourself - and to summon the courage it takes to find yourself again.

Woodworking is thriving in the hands-on, DIY, maker world we currently live in. Yet, for it's increasing popularity, there are many crafters who don't engage in woodworking because they falsely believe you need a large workshop and a full-blown collection of tools and equipment. The Minimalist Woodworker is about eliminating this myth. To enjoy woodworking, all you need is a few essential tools, a little bit of space, and the desire to make something with your own two hands. The Minimalist Woodworker is about making woodworking clean and simple — from the tools and the workspace to the easy-to-follow instructions. It eliminates the fears and excuses as it demystifies the craft. Written by Vic Tesolin, aka the Minimalist Woodworker, a woodworker, instructor, and writer who is currently a technical adviser at Lee Valley Tools, The Minimalist Woodworker is a stress-free approach for the hobbyist that emphasizes the destination is actually the journey. Beginning with an understanding of the minimalist mindset, The Minimalist Woodworker quickly details how to make a small space productive and outlines the most efficient tools for a woodworker. Each piece of equipment is explained and instructions on how to use are provided. Techniques for keeping them sharp and maintained are also explained. Once space and tools are covered, seven projects are presented: a saw bench and matching saw horse, a Nicholson-style workbench, a shooting board/bench hook, a shop mallet, and a small hanging cabinet. Each project not only develops woodworking skills, but also outfits The Minimalist Woodworker's small shop. With step-by-step instruction, photos and illustrations, and an easy-going voice, The Minimalist Woodworker offers a stress-free point of entry into the life-long craft of woodworking.

Timely information on scientific and engineering developments occurring in laboratories around the world provides critical input to maintaining the economic and technological strength of the United States. Moreover, sharing this information quickly with other countries can greatly enhance the productivity of scientists and engineers. These are some of the reasons why the National Science Foundation (NSF) has been involved in funding science and technology assessments comparing the United States and foreign countries since the early 1980s. A substantial number of these studies have been conducted by the World Technology Evaluation Center (WTEC) managed by Loyola College through a cooperative agreement with NSF. The National Science and Technology Council (NSTC), Committee on Technology's Interagency Working Group on NanoScience, Engineering and Technology (CT/IWGN) worked with WTEC to develop the scope of this Nanostucture Science and Technology report in an effort to develop a baseline of understanding for how to strategically make Federal nanoscale R&D investments in the coming years. The purpose of the NSTC/WTEC activity is to assess R&D efforts in other countries in specific areas of technology, to compare these efforts and their results to U. S. research in the same areas, and to identify opportunities for international collaboration in precompetitive research. Many U. S. organizations support substantial data gathering and analysis efforts focusing on nations such as Japan. But often the results of these studies are not widely available. At the same time, government and privately sponsored studies that are in the public domain tend to be "input" studies.
