This book shows how,
during the period of
the Japanese economic
miracle, a distinctive

female employment system was developed alongside, and different from, the better known Japanese employment system which was applied to male employees. Women, Work and the Japanese Economic Miracle describes and analyses the place of female workers in the cotton textile industry, which was a crucially important industry with a large workforce. In presenting detailed data on such key issues as recruitment systems, management practices

and the working experience of the women involved, it demonstrates the importance for Japan's postwar economy of harnessing female labour during these years.

Conceived as a useful and illuminating primer in visual thinking, it explores principles of design through a range of historical and contemporary works,

uncovering ideas relevant not just to the design of posters but to 2D design more generally. How Posters Work has a unique focus on visual language. Rather than provide a history of the genre or a compilation of collectibles, the book is organized around active design principles. Concepts such as "Simplify," "Focus the eye," "Exploit the diagonal," "Reverse expectations," and "Say two things at once" are illustrated with a diverse range of posters, from avant-garde classics and rarely seen international works to contemporary pieces by today's leading graphic designers. Illustrated with over

150 works from the collection of Cooper Hewitt, Smithsonian Design Museum, *How Posters Work* provides a stunning education in seeing and making, demonstrating how some of the world's most creative designers have mobilized principles of layout, composition, psychology, and rhetoric to produce powerful acts of visual communication

Whilst accounting for the present-day popularity and relevance of Alan Watts' contributions to psychology, religion, arts, and humanities, this

interdisciplinary collection grapples with the ongoing criticisms which surround Watts' life and work. Offering rich examination of as yet underexplored aspects of Watts' influence in 1960s counterculture, this volume offers unique application of Watts' thinking to contemporary issues and critically engages with controversies surrounding the commodification of Watts' ideas, his alleged misreading of Biblical

texts, and his apparent distortion of Asian religions and spirituality. Featuring a broad range of international contributors and bringing Watts' ideas squarely into the contemporary context, the text provides a comprehensive, yet nuanced exploration of Watts' thinking on psychotherapy, Buddhism, language, music, and sexuality. This text will benefit researchers, doctoral students, and academics in the fields of

psychotherapy, phenomenology, and the philosophy of psychology more broadly. Those interested in Jungian psychotherapy, spirituality, and the self and social identity will also enjoy this volume.

'Fascinating ... not only a history of graffiti, but also a history of the 18th century through lost voices of the people who lived through it.' The Times What if walls could

talk? For historian Madeleine Pelling, they can - if you know where to look. A brilliant new cultural history of the long eighteenth century, *Writing on the Wall* is told through the marks its citizens left behind, bringing into focus lost voices from the highest to the lowest in society. From the centre of London to the islands of the Caribbean, Pelling goes in search of graffiti, evidence of how ordinary people experienced the world-changing events

that defined their lives - from political prisoners to sex workers, homesick sailors, Romantic poets and the artisans of the industrial revolution. Here are lives, loves, triumphs and failures, scratched into the walls of prisons and latrines, chalked up on doors and etched into windows. The names of their creators may be lost to history, but together they tell the real story of Britain's most rebellious and transformative century.

Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged

monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on

the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers

every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path. Mitsubishi Gasoline

Engine 4G3 Workshop Manual Cooper Hewitt International terrorism and the development of weapons of mass destruction have given war an unlimited capability that can cause total destruction of all living things as well as the world in which we reside. Although human beings realize that this catastrophic outcome is possible, they continue to engage in wars. What forces drive them to do so? Sounds: A Pathway to

World Peace attempts to answer that question by examining the survival and socializing forces that govern human interactions, identifying the behaviors these forces initiate, and reviewing the circumstances that strengthen the influence of one force over the other. This information is used to develop The Behavior Set Theory. This theory is used to explain why wars exist and to provide approaches combatants can take to stop the Arab-	Israeli conflict, the war in Iraq, international terrorism, and conditions existing in the United States, where many public policies strengthen survival forces rather than socializing ones. About the Author: Alvin S.Yusin taught neurodevelopmental pediatrics at the Keck School of Medicine and directed the child development division at Los Angeles County Hospital until his retirement, when he	pursued his interest in world affairs. He has incorporated his understanding of child and adult development and behavior, as well as ideas developed by observations he has made over the years into his book. Development of the Mitsubishi UEC7LSII Type Diesel Engine

The New York Times—bestselling author of *How to Make a Spaceship* presents the remarkable, uplifting story of a life-saving medical breakthrough. In 1951

in Sydney, Australia, a fourteen-year-old boy named James Harrison was near death when he received a transfusion of blood that saved his life. A few years later, and half a world away, a shy young doctor at Columbia University realized he was more comfortable in the lab than in the examination room. Neither could have imagined how their paths would cross, or how they would change the world. In *Good Blood*, Julian Guthrie tells the gripping tale of the race to cure Rh disease, a horrible blood disease that caused a mother's immune system to attack her own unborn child. The story is anchored by two

very different men on two continents: Dr. John Gorman in New York, who would land on a brilliant yet contrarian idea, and an unassuming Australian whose almost magical blood—and his unyielding devotion to donating it—would save millions of lives. Good Blood takes us from research laboratories to hospitals, and even into Sing Sing prison, where experimental blood trials were held. It is a tale of discovery and invention, the progress and pitfalls of medicine, and the everyday heroics that fundamentally changed the health of women and babies.
