The practical need to partition the world of viruses into distinguishable, universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate, invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide, this report is the authoritative reference for virus organization, distinction, and structure.

Published by the American Geophysical Union as part of theSpecial Publications Series. Tectonic, Climatic, and Cryospheric Evolution of the AntarcticPeninsula presents the analysis of data collected during theSHALDRIL program, which sampled the most complete Cenozoicstratigraphic section in the Antarctic Peninsula. The stratigraphicintervals sampled fill major gaps in the existing stratigraphicrecord in the region, which is believed to have been the last placein Antarctica to become fully glaciated and, as such, the lastrefugium for plants and animals living on the continent. Providingpreviously unpublished results from studies aimed at improving ourunderstanding of the changes in climate, glacial setting, and faunaand flora that took place over the past 30 million years, thevolume highlights include discussions of marine seismic and drillcore records documenting the initial growth and expansion of an icesheet across the northernmost Antarctic Peninsula continental shelfin the northwestern Weddell Sea. The book features: Detailed vegetation and phytoplankton evolution from greenhousethrough icehouse conditions in Antarctica's last refugium Sand grain texture and micromorphology indicating ice sheetcontrol of weathering style Exhumational history around the Drake Passage margins fromthermochronology and sediment provenance Comprehensive review of the opening of the ocean passagewaybetween Antarctica and South America and the associated regionaltectonics. Tectonic, Climatic, and Cryospheric Evolution of theAntarctic Peninsula will be of interest to geologists,climatologists, and glaciologists interested in climate andcryosphere evolution and those factors that regulate it.

At age 53, I was diagnosed with advanced prostate cancer. It was in June 2005 that my PSA was 23.5 with a Gleason of 7. All 12 cores of the biopsy had cancer, 2 up to 75%. I knew action had to be taken, but what would I choose? Based on the current trend in medicine, I decided to go the holistic route. My research concluded that I had over 95% probability of recurrence.

Therefore, in my use of holistic treatment, in conjunction with traditional treatment I got tremendous results. But sadly 9 months after treatment all signs indicated my cancer was back. I was able to discover a holistic treatment that reduced my PSA 100%.

This volume contains papers from the technical program of the 7th Extended Semantic Web Conference (ESWC 2010), held from May 30 to June 3, 2010, in Heraklion, Greece. ESWC 2010 presented the latest results in research and applications of Semantic Web technologies. ESWC 2010 built on the success of the former European Semantic Web Conference series, but sought to extend its focus by engaging with other communities within and outside Information and Communication Technologies, in which semantics can play an important role. At the same time, ESWC has become a truly international conference. Semantics of Web content, enriched with domain theories (ontologies), data about Web usage, natural language processing, etc., will enable a Web that p- vides a qualitatively new level of functionality. It will weave together a large network of human knowledge and make this knowledge machine-processable. Various automated services, based on reasoning with metadata and ontologies, will help the users to achieve their goals by accessing and processing infor- tion in machine-understandable form. This network of knowledge systems will ultimately lead to truly intelligent systems, which will be employed for va- ous complex decision-making tasks. Research about Web semantics can bene?t from ideas and cross-fertilization with many other areas: arti?cial intelligence, natural language processing, database and information systems, information - trieval, multimedia, distributed systems, social networks, Web engineering, and Web science.
