While academic librarians frequently discuss critical thinking and its relationship to information literacy, the literature does not contain an abundance of sources on the topic. Therefore, this works provides a current and timely perspective on the possible roles of critical thinking within the library program. The work contains a variety of approaches likely to benefit the practicing librarian. It begins with a review of the literature, followed by theoretical approaches involving constructivism and the Socratic method. Readers will find pieces on the integration of critical thinking into the first-year experience and course-specific case studies, as well as a selection on a campus-wide critical thinking project. In each of the pieces, librarians are exploring new ways to meet their instructional goals, including the goal of teaching critical thinking skills to students across the curriculum. This book was originally published as a special issue of College & Undergraduate Libraries.

Inviting Understanding University Press of Colorado In the music classroom, instructors who hope to receive aid are required to provide data on their classroom programs. Due to the lack of reliable, valid large-scale assessments

of student achievement in music, however, music educators in schools that accept funds face a considerable challenge in finding a way to measure student learning in their classrooms. From Australia to Taiwan to the Netherlands, music teachers experience similar struggles in the quest for a definitive assessment resource that can be used by both music educators and researchers. In this two-volume Handbook, contributors from across the globe come together to provide an authority on the assessment, measurement, and evaluation of student learning in music. The Handbook's first volume emphasizes international and theoretical perspectives on music education assessment in the major world regions. This volume also looks at technical aspects of measurement in music, and outlines situations where theoretical foundations can be applied to the development of tests in music. The Handbook's second volume offers a series of practical and US-focused approaches to music education assessment. Chapters address assessment in different types of US classrooms; how to assess specific skills or requirements; and how assessment can be used in tertiary and music teacher education classrooms. Together, both volumes of The Oxford Handbook of Assessment in Music Education

pave the way forward for music educators and researchers in the field.

As new media mature, the changes they bring to writing in college are many and suggest implications not only for the tools of writing, but also for the contexts, personae, and conventions of

writing. An especially visible change has been the increase of visual elements-from typographic flexibility to the easy use and manipulation of color and images. Another would be in the scenes of writing-web sites, presentation "slides," email, online conferencing and coursework, even help files, all reflect non-traditional venues that new media have brought to writing. By one logic, we must reconsider traditional views even of what counts as writing; a database, for example, could be a new form of written work. The authors of Writing New Media bring these ideas and the changes they imply for writing instruction to the audience of rhetoric/composition scholars. Their aim is to expand the college writing teacher's understanding of new media and to help teachers prepare students to write effectively with new media beyond the classroom. Each chapter in the volume includes a lengthy discussion of rhetorical and technological background, and then follows with classroom-tested assignments from the authors' own teaching.
