"Connected Services is a must-read for telco strategists who need to get up to speed on how the world of

software and the web 2. 0 works." —Andreas Constantinou, Research Director, VisionMobile "This book is a must read for those charged with leading innovation in a world of connected services where telco and Internet collide." —Jason Goecke, VP of Innovation, Voxeo Labs This book explains the common underlying technological themes that underpin the new era of connected services in a post Web 2.0 epoch In this book, the author explores the underlying technological themes that underpin the new era of connected services. Furthermore, it explains how the technologies work and what makes each of them significant, for example, the potential for finding new meaning in data in the world of BIG DATA platforms, often referred to as "No-SQL" databases. In addition, it tackles the newest areas of technology such as HTML5, Android, iOS, open source, mash-ups, cloud computing, real-time Web, augmented reality, and more. Finally, the book discusses the opportunities and challenges of a connected world where both machines and people communicate in a pervasive fashion, looking beyond the hype and promise of emerging categories of communication such as the "Internet of Things" and "Real-time Web" to show managers how to understand the potential of the enabling technologies and apply them for meaningful applications in their own world. Key Features: Explores the common and emergent underlying technological themes that underpin the new era of connected services Addresses the newest areas of Internet technology such as web and mobile 2.0, open source, mash-ups, cloud computing, web 3.0, augmented reality, and more Shows the reader how to understand the potential of the enabling technologies and apply them for meaningful applications in their own world Discusses new developments in the technological landscape such as Smartphone proliferation, maturation of Web 2.0, increased convergence between mobile networks and the Internet, and so forth Examines modern software paradigms like Software-as-as-Service (SaaS), Platform-as-a-

Service (PaaS) and Network-as-a-Service (NaaS) Explores in detail how Web start-ups really work and what telcos can do to adopt lean and agile methods This book will be an invaluable guide for technical designers and managers, project managers, product managers, CEOs etc. at mobile operators (O2, Vodafone, Orange, T-Mobile, BT), fixed operators, converged operators and their contributory supplier networks (e.g. infrastructure providers). Internet providers (Google, Yahoo, Amazon, eBay, Apple, Facebook), analysts, product managers, developers, architects, consultants, technology investors, analysts, marketing directors, business development directors will also find this book of interest.

This book looks at two-stage industrial cluster theory and new innovation models in view of IT-ization and servitization of products. The formation of industrial clusters such as export processing zones and special economic zones has been the preferred mechanism for developing countries to boost their industrial development and export performance for the last several decades. Existing literature related to Development Economics cited numerous benefits of industrial clusters and several countries have reaped such benefits. The book goes beyond formation of traditional industrial clusters. It promotes the idea of formation of two-stage clusters. The book further stresses on new innovation models. The ideas are promoted based on the empirical evidence of Chinese and Taiwanese firms in consumer electronics and automobile sectors. Finally, the book looks at firm strategies in new business environment which is dominated by servitization of industrial products. It argues for firms to integrate manufacturing and services to a great extent. To substantiate the arguments, empirical evidence comes from India, Taiwan, and Bangladesh.

The study further finds evidence, perhaps for the first time that innovation and knowledge acquisition strategies are influenced not only by size of firms but also vary with market preferences.

This proceedings volume includes the full research papers presented at the First Int- national Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Inter- tivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a- mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three in- pendent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and

complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program. *Mobile App for Business Up* Plunkett Research, Ltd. We are surrounded by products that have minds of their own. Computing power, in the form of microcontrollers, microprocessors, sensors, and data storage chips, has become so cheap that manufacturers are building connectivity and embedded intelligence into all types of consumer goods. These 'smart products' are fundamentally changing both the competitive landscape for business and the daily lives of consumers. This book analyzes the evolution of smart products to help managers understand the impact of embedded product

intelligence on corporate strategy, consumer value, and industry competition. It describes four different ecosystem strategies for designing and launching smart products: the control-focused Hegemon, the standards-focused Federator, the high growth and brand-focused Charismatic Leader, and the disruptive industry Transformer. This ecosystem model is then applied to smart products in the automotive, wireless, energy, residential, and health industries. The book concludes with recommendations for successfully managing smart products and services.
