Standardized testing makes understanding students' strengths and weaknesses more difficult, and class time spent on testing consumes scarce time and attention needed to support the success of all students—further disadvantaging ELLs, students with exceptionalities, low income, and racially minoritized students.

Language and Power in Blogs
systematically analyses the
discursive practices of
bloggers and their readers in
eight English-language
personal/diary blogs. The main
focus is thereby placed on ties
between these practices and
power. The book demonstrates
that the exercise of power in
this mode can be studied via
the analysis of conversational
control (turn-taking,
speakership and topic control),
coupled with research on

agreements and disagreements. In this vein, it reveals that control of the floor is strongly tied not solely to rates of participation, but more strikingly to the types of contributions interlocutors make. With its detailed linguistic analyses and comprehensive theoretical and methodological treatment of language use and power, the book is interesting for researchers and students working within the domains of pragmatics, discourse analysis, text linguistics and corpus linguistics, in both offline and online settings.

Complementing earlier efforts to scrutinize the uses of models in the field of media and communication studies, this volume reassesses old perspectives and delineates new theoretical options for communication inquiry. It is the first book to undertake a philosophical investigation of the significance of modelling in the study of the varying phenomena, processes, and practices of communication. By homing in on the manifestations and purposes of modelling in ordinary discourses on communication as well as in theoretical expositions, the essays collected in this book cast new light on the importance of models for communication inquiry. This volume challenges received view of communication models as mere diagrams and opens up new paths of conceptual inquiry in communication research.

Since passage of the of No Child Left Behind Act in 2001, academic researchers, econometricians, and statisticians have been exploring various analytical methods of

documenting students' academic progress over time. Known as value-added models (VAMs), these methods are meant to measure the value a teacher or school adds to student learning from one year to the next. To date, however, there is very little evidence to support the trustworthiness of these models. What is becoming increasingly evident, yet often ignored mainly by policymakers, is that VAMs are 1) unreliable, 2) invalid, 3) nontransparent, 4) unfair, 5) fraught with measurement errors and 6) being inappropriately used to make consequential decisions regarding such things as teacher pay, retention, and termination. Unfortunately, their unintended consequences are not fully recognized at this point either. Given such, the timeliness of this well-researched and thoughtful book cannot be overstated. This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research-based ways.
