In recent years AI has been
experiencing a deep internal
debate on the appropriateness of
the symbolic-based paradigm and
all of its consequences. While
various symbolic representation
schemes, as well as their
integration, have been proposed,
their limitations have
continuously pushed researchers
for improved versions or entirely
new ones. New viewpoints such as
the complex dynamic-based
approach with neural nets can be
regarded simply as new problem
solving techniques with specific

properties. Under this perspective,
what seems to be important is the
ability to combine heterogeneous
representation and problem-
solving techniques. Research on
heterogeneous, intelligent systems
goes hand in hand with research
on specific problem solving
methods and paradigms, therefore
representing their conceptual and
practical glueing element. The
papers contained in this
proceedings are just one instance
of such awareness activity in the
international scientific
community.
