The inside story of the epic turnaround of Ford Motor Company under the leadership of CEO Alan Mulally. At the end of 2008, Ford Motor Company was just months away from running out of cash. With the auto industry careening toward ruin, Congress offered all three Detroit automakers a bailout. General Motors and Chrysler grabbed the taxpayer lifeline, but Ford decided to save itself. Under the leadership of charismatic CEO Alan Mulally, Ford had already put together a bold plan to unify its divided global operations, transform its lackluster product lineup, and overcome a dysfunctional culture of infighting, backstabbing, and excuses. It was an extraordinary risk, but it was the only way the Ford family—America's last

great industrial dynasty—could hold on to their company. Mulally and his team pulled off one of the greatest comebacks in business history. As the rest of Detroit collapsed, Ford went from the brink of bankruptcy to being the most profitable automaker in the world. *American Icon* is the compelling, behind-the-scenes account of that epic turnaround. In one of the great management narratives of our time, Hoffman puts the reader inside the boardroom as Mulally uses his celebrated Business Plan Review meetings to drive change and force Ford to deal with the painful realities of the American auto industry. Hoffman was granted unprecedented access to Ford's top executives and top-secret company documents. He spent countless hours with Alan Mulally, Bill Ford, the Ford family, former executives, labor leaders, and company directors. In the bestselling tradition of *Too Big to Fail* and *The Big Short*, *American Icon* is narrative nonfiction at its vivid and colorful best.

From the internationally bestselling author and prizewinning economist—a highly original guide to the global economy. In his bestselling *23 Things They Don't Tell You About Capitalism*, Cambridge economist Ha-Joon Chang brilliantly debunked many of the predominant myths of neoclassical economics. Now, in an entertaining and accessible primer, he explains how the global economy actually works—in real-world terms. Writing with irreverent wit, a deep knowledge of history, and a disregard for conventional economic pieties, Chang offers insights that will never be found in the textbooks. Unlike many economists, who present only one view of their discipline, Chang introduces a wide range of economic theories, from classical to Keynesian, revealing how each has its strengths and weaknesses, and why there is no one way to explain economic behavior. Instead, by ignoring the received wisdom and exposing the myriad forces that shape our financial world, Chang gives us the tools we need to understand our increasingly global and interconnected world often driven by economics. From the future of the Euro, inequality in China, or the condition of the American manufacturing industry here in the United States—*Economics: The User's Guide* is a concise and expertly crafted guide to economic fundamentals that offers a clear and accurate picture of the global economy and how and why it affects our daily lives.

Tech giants and automakers have been teaching robots to drive. Robot-controlled cars have already logged millions of miles. These technological marvels promise cleaner air, smoother traffic, and tens of thousands of lives saved. But even if robots turn into responsible drivers, are we ready to be a nation of passengers? In *Are We There Yet?*, Dan Albert combines historical scholarship with personal narrative to explore how car culture has suffused America's DNA. The plain, old-fashioned, human-driven car built our economy, won our wars, and shaped our democratic creed as it moved us about. Driver's ed made teenagers into citizens; auto repair made boys into men. Crusades against the automobile are nothing new. Its arrival sparked battles over street space, pitting the masses against the millionaires who terrorized pedestrians. When the masses got cars of their own, they learned to love driving too. During World War II, Washington nationalized Detroit and postwar Americans embraced car and country as if they were one. Then came 1960s environmentalism and the energy crises of the 1970s. Many predicted, even welcomed, the death of the automobile. But many more rose to its defense. They embraced trucker culture and took to Citizen Band radios, demanding enough gas to keep their big boats afloat. Since the 1980s, the car culture has triumphed and we now drive more miles than ever before. Have we reached the end of the road this time? Fewer young people are learning to drive. Ride hailing is replacing car buying, and with electrification a long and noble tradition of amateur car repair—to say nothing of the visceral sound of gasoline exploding inside a big V8—will come to an end. When a robot takes over the driver's seat, what's to become of us? *Are We There Yet?* carries us from muddy tracks to superhighways, from horseless buggies to driverless electric vehicles. Like any good road trip, it's an adventure so fun you don't even notice how much you've learned along the way.

A seventeen-volume compilation of selected AEF records gathered by Army historians during the interwar years. This collection in no way represents an exhaustive record of the Army's months in France, but it is certainly worthy of serious consideration and thoughtful review by students of military history and strategy and will serve as a useful jumping off point for any earnest scholarship on the war. --from Foreword by William A Stofft.
