In the last 20-30 years, research on affective determinants of health behavior has proliferated. *Affective Determinants of Health Behavior* brings together this burgeoning area of research into a single volume and features contributions from leading experts in their respective areas. Editors David M. Williams, Ryan E. Rhodes, and Mark T. Conner and their contributing authors focus on a fascinating range of affective concepts, including (but not limited to) hedonic response, incidental affect, perceived satisfaction, anticipated affect, affective attitudes, and affective associations. In the first part of the book, the role of affective concepts in multiple theories of health behavior is highlighted and expanded, including theories of action control, dual-processing, temporal self-regulation, self-determination, and planned behavior, along with a new theory of hedonic motivation. The second part of the book focuses on the role of affective concepts in specific health behavior domains, including physical activity, eating, smoking, substance use, sex, tanning, blood donation, the performance of health professionals, cancer screenings, and cancer control. *Affective Determinants of Health Behavior* offers readers an important window into existing research and serves as a showcase for important insights on possible new directions and implications for intervention.

This book outlines the effects that technology-induced change will have on sport within the next five to ten years, and provides food for thought concerning what lies further ahead. Presented as a collection of essays, the authors are leading academics from renowned institutions such as Massachusetts Institute of Technology, Queensland University of Technology, and the University of Cambridge, and practitioners with extensive technological expertise. In their essays, the authors examine the impacts of emerging technologies like artificial intelligence, the Internet of Things, and robotics on sports and assess how they will change sport itself, consumer behavior, and existing business models. The book will help athletes, entrepreneurs, and innovators working in the sports industry to spot trendsetting technologies, gain deeper insights into how

they will affect their activities, and identify the most effective responses to stay ahead of the competition both on and off the pitch.

This book explores topics that are central to the field of spacecraft attitude determination and control. The authors provide rigorous theoretical derivations of significant algorithms accompanied by a generous amount of qualitative discussions of the subject matter. The book documents the development of the important concepts and methods in a manner accessible to practicing engineers, graduate-level engineering students and applied mathematicians. It includes detailed examples from actual mission designs to help ease the transition from theory to practice and also provides prototype algorithms that are readily available on the author's website. Subject matter includes both theoretical derivations and practical implementation of spacecraft attitude determination and control systems. It provides detailed derivations for attitude kinematics and dynamics and provides detailed description of the most widely used attitude parameterization, the quaternion. This title also provides a thorough treatise of attitude dynamics including Jacobian elliptical functions. It is the first known book to provide detailed derivations and explanations of state attitude determination and gives readers real-world examples from actual working spacecraft missions. The subject matter is chosen to fill the void of existing textbooks and treatises, especially in state and dynamics attitude determination. MATLAB code of all examples will be provided through an external website.

This book examines current topics and trends in strategic auditing, accounting and finance in digital transformation both from a theoretical and practical perspective. It covers areas such as internal control, corporate governance, enterprise risk management, sustainability and competition. The contributors of this volume emphasize how strategic approaches in this area help companies in achieving targets. The contributions illustrate how by providing good governance, reliable financial

reporting, and accountability, businesses can win a competitive advantage. It further discusses how new technological developments like artificial intelligence (AI), cybersystems, network technologies, financial mobility and smart applications, will shape the future of accounting and auditing for firms.?

For five decades, negative body image has been a major focus of study due to its association with psychological and social morbidity, including eating disorders. However, more recently the body image construct has broadened to include positive ways of living in the body, enabling greater understanding of embodied well-being, as well as protective factors and interventions to guide the prevention and treatment of eating disorders. *Handbook of Positive Body Image and Embodiment* is the first comprehensive, research-based resource to address the breadth of innovative theoretical concepts and related practices concerning positive ways of living in the body, including positive body image and embodiment. Presenting 37 chapters by world-renowned experts in body image and eating behaviors, this state-of-the-art collection delineates constructs of positive body image and embodiment, as well as social environments (such as families, peers, schools, media, and the Internet) and therapeutic processes that can enhance them. Constructs examined include positive embodiment, body appreciation, body functionality, body image flexibility, broad conceptualization of beauty, intuitive eating, and attuned sexuality. Also discussed are protective factors, such as environments that promote body acceptance, personal safety, diversity, and activism, and a resistant stance towards objectification, media images, and restrictive feminine ideals. The handbook also explores how therapeutic interventions (including Acceptance and Commitment Therapy, Cognitive Dissonance, and many more) and public health and policy initiatives can inform scholarly, clinical, and prevention-based work in the field of eating disorders.

This collection of thirteen new essays is the first to examine, from a range of disciplinary perspectives, how the new technologies and global reach of the Internet are changing the theory and practice of free speech. The rapid expansion of online communication, as well as the changing roles of government and private organizations in monitoring and regulating the digital world, give rise to new questions, including: How do philosophical defenses of the right to freedom of expression, developed in the age of the town square and the printing press, apply in the digital age? Should search engines be covered by free speech principles? How should international conflicts over online speech regulations be resolved? Is there a right to be forgotten that is at odds with the right to free speech? How has the Internet facilitated new speech-based harms such as cyber-stalking, twitter-trolling, and revenge porn, and how should these harms be addressed? The contributors to this groundbreaking volume include philosophers, legal theorists, political scientists, communications scholars, public policy makers, and activists.

Does value-added modeling (VAM) demonstrate the importance of teachers to student outcomes? The authors clarify the primary questions raised by VAM for measuring teacher effects, review the most important recent applications of VAM, and discuss a variety of statistical and measurement issues that might affect the validity of VAM inferences. The authors identify numerous possible sources of error and bias in teacher effects and recommend a number of steps for future research into these potential errors.

Applied Linear Statistical Models 5e is the long established leading authoritative text and reference on statistical modeling. For students in most any discipline where statistical analysis or interpretation is used, ALSM serves as the standard work. The text includes brief introductory and review material, and then proceeds through regression and modeling for the first half, and through ANOVA and Experimental Design in the second half. All topics are presented in a precise and clear style supported with solved examples, numbered formulae, graphic illustrations, and "Notes" to provide depth and statistical accuracy and precision. Applications used within the text and the hallmark problems, exercises, and projects are drawn from virtually all disciplines and fields providing motivation for students in virtually any college. The Fifth edition provides an increased use of computing and graphical analysis throughout, without sacrificing concepts or rigor. In general, the 5e uses larger data sets in examples and exercises, and where methods can be automated within software without loss of understanding, it is so done.

This book is a comprehensive text on the all-important psychosocial aspects of cancer in children. Edited by an experienced psycho-oncologist and an equally experienced pediatric oncologist, the book brings together an international group of contributors composed of pediatric oncologists and psychologists/psycho-oncologists. This unique balance of contributors gives the book a focus on the real-life practical aspects of children undergoing treatment for cancer. The book helps health care professionals, who look after children and adolescents with cancer, in dealing with the difficult and complex problems that face the child, his siblings and his parents. It deals with critical issues such as the neuropsychological impact of treatment, (including bone marrow

transplantation), pain, quality of life in survivors, palliative care, talking to children and their families about death, and providing support to the dying. An important part of the book provides tools for evaluation and methods of psychological intervention. It is thus a very practical work for psycho-oncologists, pediatric oncologists, pediatricians, psychologists, nurses, social workers and art therapists dealing with the problems that children with cancer have to confront. A comprehensive book on the clinical approach to psychosocial problems of children with cancer Includes evaluation tools and psychological intervention techniques Contributions from both pediatric oncologists and psycho-oncologists highlight the team approach to the treatment of childhood cancers

This volume represents an early attempt at assessing the Long War, now in its 14th year. Forged in the fires of the 9/11 attacks, the war includes campaigns against al Qaeda, major conflicts in Iraq and Afghanistan, and operations in the Horn of Africa, the Republic of the Philippines, and globally, in the air and on the sea. The authors herein treat only the campaigns in Afghanistan and Iraq, the largest U.S. efforts. It is intended for future senior officers, their advisors, and other national security decision makers. By derivation, it is also a book for students in joint professional military education courses, which will qualify them to work in the field of strategy. While the book tends to focus on strategic decisions and developments of land wars among the people, it acknowledges that the status of the United States as a great power and the strength of its ground forces depend in large measure on the dominance of the U.S. Navy and U.S. Air Force in their respective domains.

An Analysis of the Economic Torts McGraw-Hill Education

Islam encourages business and financial transactions as a way of securing the basic needs for all human beings, but these need to be conducted in accordance with the principles contained in the Qur'ān and Sunnah. However, these

legal concepts are not classified subject-wise, and the verses on commercial law, like all other topics, are scattered throughout the Qur'ān, making it difficult for readers to gain a full understanding of the topic. This, therefore, is the first comprehensive book to demystify Islamic Contract Law and specifically Islamic Financial Contracts, and to examine its roots and history. The book is written in a clear style to allow for a greater understanding of the more challenging and misunderstood areas pertaining to Islamic business and financial contracts. It also contributes a series of chapters which address the market niche and need, concerning Shariah compliance for Islamic financial products and services. The book is divided into 16 chapters in order to provide a holistic and thorough overview of Islamic law of contract. It covers the objections and misconceptions surrounding Islamic business and financial contracts. It also includes the key features and guiding principles of Islamic law of contract and offers technical know-how, illustrating the concept of formation of a contract, as well as the essential elements of a valid contract. The authors also offer a discussion on the system of options under Islamic business and financial contracts and potential solutions to breach of contracts. The book will serve as a handy reference for scholars and students of Islamic business and finance and Islamic commercial law and will also be beneficial for practitioners as well as legal and judicial officers. It will open new doors for further research in the field of Islamic Financial Contracts.

Knowledge updating is a never-ending process and so should be the revision of an effective textbook. The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. The authors have, however, been thinking, for the last few years that the book needed not only a thorough revision but rather a substantial rewriting. They now take great pleasure in presenting to the readers the twelfth, thoroughly revised and enlarged, Golden Jubilee edition of the book. The subject-matter in the entire book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities.
