The classification system used today is that of Whittaker (1959, modified by Margulis), and contains five kingdoms: prokaryotae, protoctista, fungi, plantae and animalia. The greatest division now recognised is not between plants and animals (which are relatively similar), but between the prokaryotes (cells without nuclei) and ... Skills Worksheet Classification of Organisms

Modern Classification. Over the years, many models for classifying organisms have been touted as the next best one. Linnaeus's scheme of classifying everything into two kingdoms was the first real attempt, and it lasted for more than 200 years! However, because living organisms are so diverse, Linnaeus's classification system is considered inadequate today as a means of accurately representing the degree of relationship between organisms.
