This book continues its tradition and orientation about managing people from different cultures and managing global organizations to get effective results. "This is much more than a new edition. It is a huge step forward. The strategy and culture chapters get in much closer to the small, focused details that make such a difference in implementation and that are so difficult to teach. Separating out personal integrity and corporate citizenship allows for a close examination of critical issues that are all too often glossed over. The expanded explanation of the MBI model works well." Jeanne McNett, Assumption College School, Family, and Community Partnerships Cornell University Press

When both an industry's workers and its customers report high and rising frustration with the way they are being treated, something is fundamentally wrong. In response to these conditions, many of the world's airlines have made ever-deeper cuts in services and their workforces. Is it too much to expect airlines, or any other enterprise, to provide a fair return to investors, high-quality reliable service to their customers, and good jobs for their employees? Measured against these three expectations, the airline industry is failing. In the first five years of the twenty-first century alone, U.S. airlines lost a total of \$30 billion while shedding 100,000 jobs, forcing the remaining workers to give up over \$15 billion in wages and benefits. Combined with plummeting employee morale, shortages of air traffic controllers, and increased congestion and flight delays, a total collapse of the industry may be coming. Is this state of affairs inevitable? Or is it possible to design a more sustainable, less volatile industry that better balances the objectives of customers, investors, employees, and the wider society? Does deregulation imply total abrogation of government's responsibility to oversee an industry showing the clear signs of deterioration and increasing risk of a pending crisis? Greg J. Bamber, Jody Hoffer Gittel, Thomas A. Kochan, and Andrew von Nordenflycht explore such questions in a well-informed and engaging way, using a mix of quantitative evidence and qualitative studies of airlines from North America, Asia, Australia, and Europe. Up in the Air provides clear and realistic strategies for achieving a better, more equitable balance among the interests of customers, employees, and shareholders. Specifically, the authors recommend that firms learn from the innovations of companies like Southwest and Continental Airlines in order to build a positive workplace culture that fosters coordination and commitment to high-quality service, labor relations policies that avoid long drawn-out conflicts in negotiating new agreements, and business strategies that can sustain investor, employee, and customer support through the ups and downs of business cycles.

Modern Database Management Springer Science & Business Media During the 1760s and 1770s, those who were sensitive and supposedly suffering made public show of their delicacy by going to the new establishments known as "restaurateurs' rooms" and sipping their bouillons there. However, the restaurants that had begun as purveyors of health food soon became sites for extending frugal, politically correct hospitality and later became symbols of aristocratic greed. From restoratives to Restoration, Spang establishes the restaurant at the very intersection of public and private in French culture--the first public place where people went to be private.
