**Spiral bound Version** Elsevier  
Health Sciences  
Management decisions on  
appropriate practices and policies  
regarding tropical forests often  
need to be made in spite of  
innumerable uncertainties and  
complexities. Among the  
uncertainties are the lack of  
formalization of lessons learned  
regarding the impacts of previous  
programs and projects. Beyond the  
challenges of generating the  
proper information on these  
impacts, there are other  
difficulties that relate with how  
to socialize the information and  
knowledge gained so that change is  
transformational and enduring. The  
main complexities lie in  
understanding the interactions of

social-ecological systems at  
different scales and how they  
varied through time in response to  
policy and other processes. This  
volume is part of a broad research  
effort to develop an independent  
evaluation of certification impacts  
with stakeholder input, which  
focuses on FSC certification of  
natural tropical forests. More  
specifically, the evaluation  
program aims at building the  
evidence base of the empirical  
biophysical, social, economic, and  
policy effects that FSC  
certification of natural forest has  
had in Brazil as well as in other  
tropical countries. The contents of  
this volume highlight the  
opportunities and constraints that  
those responsible for managing

---

natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

A groundbreaking narrative investigation of childbirth

in the age of machines, malpractice, and managed care, Pushed presents the complete picture of maternity care in America. From inside the operating room of a hospital with a 44% Cesarean rate to the living room floor of a woman who gives birth with an illegal midwife, Block exposes a system in which few women have an optimal experience. Pushed surveys the public health impact of routine labor inductions, C-sections, and epidurals, but also examines childbirth as a women's rights issue: Do women even have the

---

right to choose a normal birth? Is that right being upheld? A wake-up call for our times, Block's gripping research reveals that while emergency obstetric care is essential, we are overusing medical technology at the expense of maternal and infant health.
