"This manual describes Shell Oil Company's safe practices and safe guidelines for the marine operations of mobile offshore drilling units (MODUs) on Shell leases. It was prepared by the Exploration and Production Department of Shell Oil Company and this manual is provided as a service to Shell Subsidiaries pursuant to Service Agreements. ... This manual is intended to serve as a guide for safe marine operations of MODUs for Shell Foremen, Shell Superintendents and Shell Engineering. ... The mandatory requirements are considered minimums for all Shell operations. The scope of this manual is limited to those mobile offshore drilling units ... that would require USCG certification or letter of compliance if such MODU were to operate in waters off the coast of the United States. Local conditions or experience will often dictate a need for additional or more stringent requirements. ... certain items are considered of sufficient importance to be designated as mandatory throughout the Company. These items are characterized by the word SHALL and the paragraph they are in will have the letter (M) in the margin. These mandatory requirements must be adhered to unless a variance is obtained"--ASTIS [online] database.

This book is designed to be a guide to demystify the journey leading to preserving family legacy. It is based on the fact that a family business is a partnership among its members, and that the most successful family business succession plan is the one devised by the family itself. In this book, the author shares his unique experience working with hundreds of business families and next-generation family business entrepreneurs from across the world. His 7-Step Methodology™ offers an innovative and a systemic approach to family business succession planning and related conflict management. It focuses on the importance of maintaining an open dialogue among family members, and it paves the way to a structured conversation among those interested in achieving an orderly transfer of wealth from one generation to another. The author further discusses the elements that traditionally cause tensions among partners who happen to be family members, and offers solutions that have been tried and tested over two decades and that are based on real-life examples and success stories. This text is designed for families in business who wish to start a succession planning conversation and to family business advisors invited to facilitate such a conversation.

This Open Access proceedings presents a good overview of the current research landscape of assembly, handling and industrial robotics. The objective of MHI Colloquium is the successful networking at both academic and management level. Thereby, the colloquium focuses an academic exchange at a high level in order to distribute the obtained research results, to determine synergy effects and trends, to connect the actors in person and in conclusion, to strengthen the research field as well as the MHI community. In addition, there is the possibility to become acquainted with the organizing institute. Primary audience is formed by members of the scientific

society for assembly, handling and industrial robotics (WGMHI). The Editors Prof. Dr.-Ing. Thorsten Schüppstuhl is head of the Institute of Aircraft Production Technology (IFPT) at the Hamburg University of Technology. Prof. Dr.-Ing. Kirsten Tracht is head of the Bremen Institute for Mechanical Engineering (bime) at the University of Bremen. Prof. Dr.-Ing. Annika Raatz is head of the Institute of Assembly Technology (match) at the Leibniz University Hannover.

This book constitutes the refereed proceedings of the 20th International Working Conference on Requirements Engineering: Foundation for Software Quality, REFSQ 2014, held in Essen, Germany, in April 2014. The 23 papers presented were carefully reviewed and selected from 89 submissions. The REFSQ conference is organised as a three-day symposium with two days devoted to scientific papers presentation with a one-day industry track in-between. Both the industry and scientific presentations concern a variety of topics, which shows the liveliness of the requirements engineering domain. These topics are for instance: scalability in RE, communication issues, compliance with law and regulations, RE for self adaptive systems, requirements traceability, new sources of requirements, domain specific RE, Natural Language issues and of course games. 'Games for RE and RE for Games' was the special topic of REFSQ 2014. This is materialized by a plenary session at the conference, and by a keynote given by Catherine Rolland, a serious games expert and project manager at KTM Advance, a French company specialized in serious games.

P.R. Cavill offers a major reinterpretation of early Tudor constitutional history. In the grand 'Whig' tradition, the parliaments of Henry VII were a disappointing retreat from the onward march towards parliamentary democracy. The king was at best indifferent and at worst hostile to parliament; its meetings were cowed and quiescent, subservient to the royal will. Yet little research has tested these assumptions. Drawing on extensive archival research, Cavill challenges existing accounts and revises our understanding of the period. Neither to the king nor to his subjects did parliament appear to be a waning institution, fading before the waxing power of the crown. For a ruler in Henry's vulnerable position, parliament helped to restore royal authority by securing the good governance that legitimated his regime. For his subjects, parliament served as a medium through which to communicate with the government and to shape - and, on occasion, criticize - its policies. Because of the demands parliament made, its impact was felt throughout the kingdom, among ordinary people as well as among the elite. Cooperation between subjects and the crown, rather than conflict, characterized these parliaments. While for many scholars parliament did not truly come of age until the 1530s, when - freed from its medieval shackles - the modern institution came to embody the sovereign nation state, in this study Henry's reign emerges as a constitutionally innovative period. Ideas of parliamentary sovereignty were already beginning to be articulated. It was here that the foundations of the 'Tudor revolution in government' were being laid.

Just as our transport systems become more and more important to our economic and social well-being, so they become more and more crowded and more at risk from congestion, disruption, and collapse. Technology and engineering can provide part of the solution, but the complete solution will need to take account of the behaviour of the users of the transport networks. The role of psychologists in this is to understand how people make decisions about the alternative modes of transport and about the alternative routes to their destinations, to understand how novice and other vulnerable users can develop safe and effective behaviours, how competent users can operate within the transport system optimally and within their

perceptual and cognitive limitations. The contributions to this volume address these issues of how the use of our transport systems can be improved by taking into account knowledge of the behaviour of the people who use the systems. Topics discussed include driver training and licensing, driver impairment, road user attitudes and behaviour, enforcement and behaviour change, driver support systems, and the psychology of mobility and transport mode choice. This work will be of value not only to psychologists but to all transport professionals interested in the application of psychology to traffic.
