Chemistry: Imagination and Implication focuses on the importance and impact of chemistry on daily living. This book discusses the essential concepts of chemistry and its application. Organized into 16 chapters, this book starts with an overview of the experimental facts, principles, and methods of chemistry as an aid in exercising intelligent and informed judgment in instances where controversy surrounds the interaction of chemistry with society or the individual. This text then explores the practical arts of metallurgy, which achieved a considerable degree of sophistication long before they were scientifically understood. The reader is then introduced to the atomic concept, the conservation of mass, as well as to the substances that constitute the living things. Other chapters consider the polymerization of amino acids into peptides and proteins. The final chapter examines the various applications of radioactive isotopes produced in particle accelerators. This book is intended for students and teachers who are involved in a chemistry course.

Emotional Engineering describes how their expectations can be satisfied and managed throughout the product life cycle, if producers focus their attention more on emotion. Emotion plays a crucial role in value recognition, but it is also important for team work, which extends beyond human-human to human-machine and human-environment to enable people to cope with frequently and extensively changing situations. Emotional Engineering proposes the development of services beyond product realization and the creation of value on a lifetime, not just a one-off, basis. As emotion is very much multidisciplinary, chapters cover a wide range of topics that can be applied to product development, including: • emotional design in the virtual environment; • shape design and modeling; • emotional robot competence; and • affective driving. Emotional Engineering is intended to provide readers with a holistic view of its research and applications, enabling them to make strategic decisions on how they can go further beyond product realization. It is recommended for all pioneers in industry, academia and government, who are trying to work with their customers to create value.
