SYNTHESIZING CHALK ...

Because the molar mass of calcium carbonate is 100. g/mol, the number of moles of calcium carbonate will be equal to the mass of chalk used to write their names divided by 100. For example, if it took 0.500 grams of chalk to write their name, the number of moles of calcium carbonate used would be $0.500 \text{ g} / 100. \text{ g/mol} = 0.00500 \text{ mol}$.

Chemistry - Moles of Chalk Lab - SlideShare

There are two parts to the lab. In the first part, students weigh chalk, write their name on the board, and

reweigh it. They use their data to calculate how many molecules of chalk were left on the board. In the second part, they weigh a cup of water, dump some water down the drain, and reweigh it.

moles of calcium carbonate will be equal to the mass of chalk used to write their names divided by 100. For example, if it took 0.500 grams of chalk to write their name, the number of moles of calcium carbonate used would be $0.500 \text{ g} / 100. \text{ g/mol} = 0.00500 \text{ mol}$. As you might imagine, answers will vary depending on
