Instructor's Manual and Test Bank [for] Money and Banking MIT Press Global banks played a significant role in transmitting the 2007-09 financial crisis to emerging-market (EM) economies. The authors examine adverse liquidity shocks on main developed-country banking systems and their relationships to EM across Europe, Asia, and Latin Amer., isolating loan supply from loan demand effects. Loan supply in EM across Europe, Asia, and Latin Amer. was affected significantly through three separate channels: (1) a contraction in direct, cross-border lending by foreign banks; (2) a contraction in local lending by foreign banks' affiliates in EM; and (3) a contraction in loan supply by

domestic banks, resulting from the funding shock to their balance sheets induced by the decline in interbank, cross-border lending. Charts and tables.

The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the

financial situation in the U.S. and around the world. THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government." News Dissector DANNY SCHECHTER is a journalist, blogger and filmmaker. He has been reporting on economic crises since the 1980's when he was with ABC News. The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce

the likelihood that the current debt wave will end in crisis and, if crises do take place, will alleviate their impact.
