Monitors also come in a range of resolutions, from full HD 1,920 x 1,080 up to 4K (3,840 x 2,160) resolution. The higher the resolution, the better the image quality, though higher resolution monitors are usually more expensive. With those considerations in mind, read on for our pick of the best monitors for photo editing.

CRT monitors generally display a resolution of 800 x 600 or 1024 x 768 pixels and can work well at different resolutions. LCD monitors, also called flat-panel displays, and laptop screens often support higher resolutions and work best at a specific resolution. The larger the monitor, usually the higher the resolution it supports.

[How to Choose the Best Monitor for Photo Editing ...](#)

When it comes to displaying images on the screen you need far less pixels than you do for printing. This is because the density of pixels on the screen is far less than what is required for printing. So, for example a typical monitor is 1920 by 1080 pixels in size so, to fill the monitor you only need an image that is 1920 by 1080 pixels in size.

The Best Monitors for Photo Editing. Long gone

are the darkroom days. Whether you're a pro or a hobbyist, here's what you need if you're using your display for photo manipulation.

Best monitor for photo editing in 2020: top screens for ...

The question is how sharp is that image going to be? A scanner's resolution is measured by a pair of numbers, such as 300×300 ppi, 600×600 ppi, or 2400×4800 ppi. This represents the resolution as the scanner moves horizontally and vertically across an item (like a slide or a photo print) during the conversion to digital.

5 Best Monitors For Photo Editing Of 2019

Resolution and the web, or a pixel is a pixel is a pixel. A monitor displays your image pixel by pixel—that's all it cares about. Your pixel dimension is how the monitor will display the image. For use on the web, or for display in email, you can set any resolution in Photoshop — just doesn't matter.
