This study continues the adaptation of the method of Case Frame analysis for the investigation of the Greek text of the New Testament. Case Frame analysis distinguishes the words of a language into two categories, predicators [words that require completion by other words for their correct grammatical use] and non-predicators [words that do not require such completion], and provides rigorous procedures for describing the syntactic, semantic, and lexical requirements that predicators impose on the words that complete their meaning. The inclusion of semantic function and feature descriptions in Case Frame analysis permits the development of a new genre of lexicon that specifies not only syntactic and lexical information (as do traditional dictionaries) but detailed semantic information. The resulting Case Frame lexicon entries are both more compact and more nuanced than traditional lexicon entries. Danove conducts an exhaustive Case Frame analysis of the ditransitive verbs of transference in the New Testament. He uses this analysis to develop a set of descriptive guidelines for interpreting and translating the various usages of ditransitive verbs of transference and applies these rules in exegetical studies of the text of the New Testament to generate a Case Frame lexicon of the verbs of transference in the New Testament. This study will distinguish the requirements of the 127 New Testament verbs of transference according to four syntactic functions, twelve semantic functions, and 22 lexical realizations. This will permit a rigorous investigation of all occurrences of verbal complements with the same syntactic, semantic, and lexical attributes. The study also will consider the influence of one semantic feature [an inherent quality of words that has implications for their lexical realization] and of the 'intrusion' of four grammatical constructions [inherent structuring templates of grammar that govern syntactic, semantic, and lexical attributes and modify meaning] on each category of complements with the same syntactic, semantic and lexical description. This will produce a rigorous description of meaning that becomes the basis

for Danove's contributions to the linguistic study of biblical Greek and to the exegesis of biblical texts.

PSYCHOLOGY InterACT Treatment Manual & Participant

---

Workbook for Addictive Disorders based on the self-help theory of Jim Maclaine. Melinda L. Lake This treatment manual has been developed for health professionals working with people suffering from addictive disorders to develop a self-help recovery process. It includes practical session guides and worksheets for participants. It follows the therapy methods of author psychologist Melinda L. Lake, in which participants undertake all 15 sessions in sequence, ideally over a five day period. The modules are best undertaken in a small group setting of 8 to 12, however are easily adapted for use in private practice. People suffering directly from addiction may also find this manual helpful. The InterACT Programme is a treatment protocol specifically targeting the addicted brain. It links the psycho-education of current neuroscience with cognitive therapy and the therapeutic principles of Acceptance Commitment Therapy. It is an inter-personal (group based) treatment method which lays the foundation for a solid self-help recovery process, and it moves participants through Prochaska & DiClemente 's (1982) stages of change from a contemplative state to the maintenance stage. It aims to break the pathological attachment to the intoxicated state and the various defensive processes that protect that attachment. The approach is based on the Interact Therapy Program devised by Psychologist Jim Maclaine in the 1980 ' s. A programme that successfully treated thousands of patients with addictions and emotional disturbances for several decades in Australian accredited private hospitals. For more information on this treatment approach or implementing the programme at your facility please contact the author at [www.re-psycle.com.au](http://www.re-psycle.com.au)

#### Forthcoming Books

This handbook on human multitasking provides an integrative overview on simultaneous and sequential multitasking and thus combines theorizing on dual task limitations as well as costs related to task switching. In addition to a wide range of empirical findings and their theoretical integration, the editors provide a number of applications of multitasking, like training, interindividual differences and applied research in traffic and health psychology and music expertise. The book is suitable for people interested in multitasking, that is, for researchers and graduate students of cognitive psychology, movement science, sport psychology, cognitive neuroscience, cognitive and neurological rehabilitation, aging sciences, and broader cognitive science. Brings together dual task studies and task switching research for the first time; Focuses on the cognitive cost related to multitasking, with an emphasis on movement science and training; Creates a bridge between movement science and cognitive psychology.
