Inspection, Maintenance, Testing, and Retirement of In-service Emergency Vehicles, 2017 Civil Service Yearbook Civil Service Year Book Issues in Autonomous Vehicle Testing and Deployment

The Necropsy Book Kogan Page Publishers

Autonomous vehicles have the potential to bring major improvements in highway safety. Motor vehicle crashes caused an estimated 36,560 fatalities in 2018; a study by the

National Highway Traffic Safety Administration (NHTSA) has shown that 94% of crashes are due to human errors. For this and other reasons, federal oversight of the testing and deployment of autonomous vehicles has been of considerable interest to Congress. In the 115th Congress, autonomous vehicle legislation passed the House as H.R. 3388, the SELF DRIVE Act, and a separate bill, S. 1885, the AV START Act, was reported from a Senate committee. Neither bill was enacted. In the 116th Congress, interest in

autonomous vehicles remains strong, but similar comprehensive legislative proposals have not been introduced. The America's Transportation Infrastructure Act of 2019, S. 2302, which has been reported by the Senate Environment and Public Works Committee, would encourage research and development of infrastructure that could accommodate new technologies such as autonomous vehicles. In recent years, private and government testing of autonomous vehicles has increased significantly,

although it is likely that widespread use of fully autonomous vehicles-where no driver attention is needed-may be many years in the future. The pace of autonomous vehicle commercialization may have slowed due to the 2018 death in Arizona of a pedestrian struck by an autonomous vehicle, which highlighted the challenges of duplicating human decision making by artificial intelligence. The National Transportation Safety Board determined that the fatality was caused by an "inadequate safety culture" at Uber- which was testing

the vehicle-and deficiencies in state and federal regulation. The U.S. Department of Transportation and NHTSA have issued three reports since 2016 that inform the discussion of federal autonomous vehicle policies, suggesting best practices that states should consider in driver regulation; a set of voluntary, publicly available self-assessments by automakers showing how they are building safety into their vehicles; and a proposal to modify the current system of granting exemptions from federal

safety standards. On February 6, 2020, NHTSA announced its approval of the first autonomous vehicle exemption-from three federal motor vehicle standards-to Nuro, a California-based company that plans to deliver packages with a robotic vehicle smaller than a typical car. Proponents of autonomous vehicles contend that lengthy revisions to current safety regulations could impede innovation, as the rules could be obsolete by the time they took effect. Federal and state regulatory agencies are addressing

vehicle and motorist standards, while Congress is considering legislative solutions to some of the regulatory challenges.
