This book considers the provisional nature of cities in relation to the Anthropocene – the proposed geological epoch of human-induced changes to the Earth system. It charts an environmental history of curfews, admonitions and alarms about dwelling on Earth. ‘ Provisional cities ’ are explored as exemplary sites for thinking about living in this unsettled time. Each chapter focuses on cities, settlements or proxy urbanisations, including past disaster zones, remote outposts in the present and future urban fossils. The book explores the dynamic, changing and contradictory relationship between architecture and the global environmental crisis and looks at how to re-position architectural and urban practice in relation to wider intellectual, environmental, political and cultural shifts. The book argues that these rounder and richer

accounts can better equip humanity to think through questions of vulnerability, responsibility and opportunity that are presented by immense processes of planetary change. These are cautionary tales for the Anthropocene. Central to this project is the proposition that living with uncertainty requires that architecture is reframed as a provisional practice. This book would be beneficial to students and academics working in architecture, geography, planning and environmental humanities as well as professionals working to shape the future of cities.

This edited collection is one of the first books to focus on the distinctive political marketing and branding strategies utilized by the candidates and their parties in one of the most gripping elections in U.S. history.

It considers why this election was so unusual from a political marketing perspective, calling for new explanations and discussions about its implications for mainstream political marketing theory and practice. At a time of political upheaval, candidates from both parties – Donald Trump and Bernie Sanders in particular – have appeared to overturn the conventional wisdom that has hitherto dominated U.S. politics: that candidates should appear ‘ presidential ’ , be politically experienced and qualified to run for office, and avoid controversial and politically incorrect positions. This book presents scholarly perspectives and research with practitioner-relatable content on practices and discourses that look specifically at the Trump, Clinton and Sanders

campaigns and how they took current understandings of political marketing and branding in new directions.

“ Clerks ” a million years ago? Didn ’ t they bounce his fat ass off a plane once? What could you possibly learn from the director of “ Cop Out ” ? The world's ever-growing demand for power has created an urgent need for new efficient and sustainable sources of energy and electricity. Today's consumers of portable electronics also demand devices that not only deliver more power but are also environmentally friendly. Fuel cells are an important alternative energy source, with promise in military, commercial and industrial applications, for example power vehicles and portable devices. A fuel cell is an electrochemical device that directly converts the chemical energy of a fuel into electrical energy. Fuel cells represent the most efficient energy conversion technologies to-date and are an integral part in the new and renewable energy chain (e.g., solar, wind and hydropower). Fuel cells can be classified as either high-temperature or lowtemperature, depending on their operating temperature, and have different materials requirements. This book is dedicated to the study of high temperature fuel cells. In hightemperature fuel cells, the electrolyte materials are ceramic or molten carbonate, while the electrode materials are ceramic or metal (but not precious metal). High operation temperature fuel cells allow internal reforming, promote rapid kinetics with non-precious materials and offer high flexibilities in fuel choice, and are potential and viable candidate to moderate the fast increase in power requirements and to minimize the impact of the increased power consumption on the environment. 'Materials for High Temperature Fuel Cells' is part of

the series on Materials for Sustainable Energy and Development edited by Prof. Max Q. Lu. The series covers advances in materials science and innovation for renewable energy, clean use of fossil energy, and greenhouse gas mitigation and associated environmental technologies.

Twenty-five years ago there was increasing optimism in policy, curriculum and research about the contribution that technology education might make to increased technological literacy in schools and the wider population. That optimism continues, although the status of technology as a learning area remains fragile in many places. This edited book is offered as a platform from which to continue discussions about how technology

education might progress into the future, and how the potential of technology education to be truly relevant and valued in school learning can be achieved. The book results from a collaboration between leading academics in the field, the wider group of authors having had input into each of the chapters. Through the development of a deep understanding of technology, based on a thoughtful philosophy, pathways are discussed to facilitate student learning opportunities in technology education. Consideration is given to the purpose(s) of technology education and how this plays out in curriculum, pedagogies, and assessment. Key dimensions, including design, critique, students' cultural capital are also explored, as are the role and place of political persuasion, professional organisations, and research that connects with practice. The discussion in the

book leads to a conclusion that technology education has both an ethical and moral responsibility to support imaginings that sustain people and communities in harmony and for the well being of the broader ecological and social environment.

The creator of YouTube 's ColdFusion explores the development of technology from Industrial Revolution to Artificial Intelligence to figure out what 's next. As each new stage of technology builds on the last, advancements start to progress at an exponential rate. In order to know where we 're headed, it 's essential to know how we got here. What hidden stories lie behind the technology we use today? What drove the men and women who invented it? What were those special moments that changed the world forever? Dagogo Altraide explores these questions in a history of human

innovation that reveals how new technologies influence each other, how our modern world came to be, and what future innovations might look like. From the electric world of Tesla and the steam engine revolution to the first computers, the invention of the internet, and the rise of artificial intelligence, New Thinking tells the stories of the men and women who changed our world with the power of new thought.

Ungoverning the Economy provides a detailed and comprehensive analysis of the politics and policy dynamics of economic policy making in Australia. The book argues that in the last twenty years there has been a transformation in Australian political economy along 'economic rationalist' lines and that this marks a significant departure from Australia's relatively

statist political economy tradition. The dominance of market forces represents a process of ungoverning the economy, at least as far as the role of elected governments in economic life is concerned. The causes and consequences of these changes are assessed in detail and the book argues that economic rationalist policies have failed to deal with Australia's most fundamental economic problems. Accordingly, there is a need to rethink economic policy and the book ends with constructive suggestions for policy reform. The book is written for a broad audience and seeks to widen the scope of economic debate.

Project sustainability has received considerable attention in recent years. The increased awareness stems from a growing concern with social development issues such as poverty reduction,

project sustainability, the equal participation of women, and the social costs of economic development. This handbook provides a comprehensive guide to the wide range of techniques available for monitoring and evaluating the main kinds of social development programs. The authors highlight or review a number of topics that have been overlooked in earlier evaluation publications, such as: -The organization of monitoring and evaluation at the project, sectoral, and national levels -The management of the databases required to elect, design, and implement new social projects and programs -The monitoring and evaluation of project sustainability -Simple and cost-effective methods of estimating project impact. The authors also discuss methods for identifying potential beneficiaries and their information needs and ways of managing evaluations.

"It is worse, much worse, than you think. If your anxiety about global warming is

dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible. In California, wildfires now rage year-round, destroying thousands of homes. Across the US, "500-year" storms pummel communities month after month, and floods displace tens of millions annually. This is only a preview of the changes to come. And they are coming fast. Without a revolution in how billions of humans conduct their lives, parts of the Earth could become close to uninhabitable, and other parts horrifically inhospitable, as soon as the end of this century. In his travelogue of our near future, David Wallace-Wells brings into stark relief the climate troubles that await -- food shortages, refugee emergencies, and other crises that will reshape the globe. But the world will be remade by warming in more profound ways as well, transforming our politics, our culture, our relationship to technology, and our sense of history. It will be all-encompassing, shaping and distorting nearly every aspect of human life as it is lived today. Like *An Inconvenient Truth* and *Silent Spring* before it, *The Uninhabitable Earth* is both a meditation on the devastation we have brought upon ourselves and an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation"--
