Multi-chip modules (MCMs) with high wiring density, controlled impedance interconnects, and thermal management capability have recently been developed to address the problems posed by advances in electronic systems that make demands for higher speeds and complexity. MCM-C/Mixed Technologies and Thick Film Sensors highlights recent advances in MCM-C technology. Developments in materials and processes which have led to increased interconnection density are reviewed: finer resolution thick film inks, high performance-low temperature dielectric tapes, precision via generation by both laser and mechanical methods, and enhanced screen printing technologies have given us feature resolution to the 50 µm line/space level. Thermal management has greatly benefitted from such new materials as cofire AlN and diamond. MCM-C technology is compatible with thick film sensors, and work is reviewed on environmental gas sensors, pressure and temperature sensors, and the development of novel materials in this area.

America in the 1990s Talk is Cheap

Fed up with the high tolls charged by your ordinary telephone service? If you're itching to cut the copper cord with your costly, traditional phone service, you need Talk is Cheap, the new, easy-to-understand guide to understanding and using Voice over Internet Protocol (VoIP) and other Internet telephone options. Technologies such as VoIP are gaining a great deal of attention these days as more people switch from standard telephone service to phone service via the Internet. But while the cost savings are outstanding, there are some issues with Internet telephony that you should know about. Are the connections reliable? Is the quality comparable? Will it include 911 services? James Gaskin's Talk is Cheap addresses these issues and many more by explaining how to make the switch and what the tradeoffs will be if you opt for Internet telephony over traditional phone services. Talk is Cheap focuses on the increasingly popular services from Vonage, which uses VoIP, and Skype--a free service that operates as a peer-to-peer (P2P) network with the ability to turn any PC, Mac, or Pocket PC into a telephone. The book explains your options; explores the background behind, the workings of, and differences between VoIP and P2P networks; and discusses the advantages and drawbacks of both technologies (including service offerings, quality, capabilities, completion rates, and more). Talk is Cheap then goes into detail on what you can expect in Internet service from traditional phone companies such as Verizon and AT&T. In addition, you will learn more advanced techniques, including how to turn your Palm or Pocket PC into an Internet phone and how to work with Wi-Fi phones and videophones. A straightforward, quick introduction to the ins and outs of using Internet telephone services, this book provides everything you need to make informed telephone decisions--whether you're thinking about the switch from traditional phone service or have already made it and want to get the most out of your new Internet telephone.

This book provides a comprehensive and integrated approach to management strategy that is based on economics. A basic introductory strategy text that integrates economic analysis with management strategy, it takes into account global competition and high-tech (Internet) developments, and recognizes that companies today can no longer expect to sustain competitive advantage but must rely on innovation (of products, processes, and transactions). Although many of the principles are illustrated with numerical examples, the text does not require a background course in economics or mathematics, and does not contain technical graphs or equations. Thus, the book is suitable for undergraduate managerial economics and strategy courses, as well as for introductory MBA courses in business strategy and as a companion to case studies. The Power Point Slides for each of the chapters is available upon request for all instructors who adopt this book as a course text. Please send your request to sales@wspsc.com.

Seminar paper from the year 2004 in the subject Business economics - Business Management, Corporate Governance, grade: 1,7 (A-), University of Bradford (School of Management), course: Applied Strategic Management, language: English, abstract: In 1928 Paul Galvin founded the company as the " Galvin Manufacturing Corporation " in Chicago, Illinois. The first product launch, called a " battery eliminator " allowed radio consumers to operate directly from household current instead of the batteries supplied with earlier models. But the company ' s name was soon displaced through its main product, " Motorola " radios, figurehead that conjures up the historical symbiosis of a mobile radio and a car (Agar, 2003). Under the leadership of Paul Galvin, Motorola became leader in military, space and commercial communications, grew as a manufacturer of consumer electronics and built its first semiconductor facility. The company founder died in 1959. As his successor Robert W. Galvin, P. Galvin ' s son, was introduced. Within his leadership Motorola expanded into the international markets, and their object of view was shifted away from consumer electronics. As a fact of this challenge, the colour-TV receiver business was sold in the mid 70 ' s, so that they could concentrate their abilities on high-technology markets in commercial, industrial and government fields. With the 80 ' s ending, Motorola had become the doyen supplier of cellular phones. (www.motorola.com) You could say, that Motorola, Inc. is a global provider of wireless, broadband, automotive communications technologies and embedded electronic products. Further on the company provides software-enhanced wireless telephone and messaging, two-way radio products and systems, as well as networking and Internet-access products, for consumers, network operators and commercial, government and industrial customers. Motorola also provides end-to-end systems for the delivery of interactive digital video, voice and high-speed data solutions for broadband operators, and embedded semiconductor solutions for customers in wireless communications, networking and transportation markets. In addition, the company offers integrated electronic systems for the automotive, telematics, industrial, telecommunications, computing and portable energy systems markets. The last reported count of employees was 88.000.
