Distance education, combining the use of correspondence texts, broadcasting and limited opportunities for face-to-face study, has been used in at least a hundred teacher training programmes over the last 25 years. Distance Education for Teacher Training is the first comparative review of the use of distance education and open learning for the training and upgrading of teachers. The book contains case studies using a broadly common format both to describe and analyse distance teacher training programmes in eleven countries across five continents. The case studies describe the methods used to examine how far the craft of teaching can be studied at a distance. Using a standardised microeconomic framework, they provide unique data on the comparative costs of training teachers by distance and conventional methods. The authors then draw general conclusions about the advantages and drawbacks of using distance education or open learning, about the conditions for success, and about comparative effects and costs. Distance Education for Teacher Training will be of value to all concerned with teacher education, whether in developing or industrialised countries, and to those working in and planning for distance education and open learning.

Adobe Flash Professional is the most popular software available for creating animations for the Web. Most people start using Flash to create vector-based animations that output small file sizes perfect for the Web. Later they want to branch out into creating rich interactive experiences for websites and mobile devices, and for that they need to learn ActionScript. Doug Winnie draws on the experience he's gained from his years as an educator to teach not only what ActionScript can do, but also to show how the code works. This gives the reader a deeper understanding of how ActionScript functions, and gives them the power to come up with original solutions when creating their own projects. Doug's book dives right into the concepts of manipulating Flash objects and the fundamentals of functions and mathematical operators. After presenting events and using scripts to control the Flash timeline, classes and conditionals are covered in depth. The final part of the book covers creating desktop applications with Adobe AIR, developing mobile applications, and working with external code libraries. Real-world projects are sprinkled generously throughout the book and Appendices include information on debugging, deciphering documentation, and using Adobe Flash Builder as an ActionScript development environment.
