This book throws new light on the drivers of migration and explores the different ways in which aspiration and desire are involved in the generation, experiences, and outcomes of migration. The authors propose novel approaches to advancing collective understanding of migration, including reassessments of classical push and pull theory; explorations of the lexicon of

---

aspiration, desire and voluntariness in migration; and reflections on the relationships between migration and modernity, youth and expectation, and anti-immigrant discourses. The chapters have a broad geographical scope, spanning migration on different continents and in diverse socio-economic and cultural settings. At a time when migration has become one of the most prominent areas of national and international political debate, this volume provides the tools for researchers to reconsider how we understand the forces and outcomes of global mobility. This book was originally published as a special issue of the Journal of Ethnic and Migration Studies.

This book applies a number of different disciplinary and geographical perspectives to ascertain whether and how European youth identify with the EU, trust EU institutions and engage in EU issues. It investigates the factors and processes that predict the different ways in which young Europeans engage (or do not engage) with social and political issues and become active European citizens. The volume is

based on results from the first two years of the Horizon 2020 CATCH-EyoU project ( “ Constructing Active Citizenship with European Youth: Policies, Practices, Challenges and Solutions ” ). It addresses different dimensions of active citizenship in the EU and different processes and contexts that explain the construction of youth active citizenship, including societal-level factors such as policy context and media; interaction-level contexts such as school and family; and individual-level factors. The final chapter emphasizes the impact of the current historical context on the development of young Europeans ’ civic identity and their understanding of the social and political

reality. With contributions from a variety of disciplines including psychology, political science, communications and education, and spanning geographic contexts across Europe, this book will be of interest to researchers studying contemporary European youth and the construction of young people ’ s identity. This fascinating book provides a stimulating introduction to analog electronics by analysing the design and construction of a radio transceiver. Essential theoretical background is given along with carefully designed laboratory and homework exercises. The author begins with a thorough description of basic

electronic components and simple circuits and goes on to describe the key elements of radio electronics, including filters, amplifiers, oscillators, mixers, and antennas. Laboratory exercises lead the reader through the design, construction, and testing of a popular radio transceiver (the NorCal 40A). A diskette containing the widely known circuit simulation software, Puff, is included in the book. This was the first book to deal with elementary electronics in the context of radio. It can be used as a textbook for introductory analog electronics courses, for more advanced undergraduate classes on radio-frequency electronics, and will also be of great interest to electronics hobbyists and radio enthusiasts.

She was herself, or was able to keep herself fairly in hand, the greater part of the time, and chaos, when it came, lasted only for a few days or weeks. Recently this condition had been reversed. She had lost knowledge of time, but she felt that centuries must have passed since those last flying, blessed hours when she knew herself at least for what she was.
