Will your next leader be insignificant—or indispensable? The importance of leadership and the impact of individual leaders has long been the subject of debate. Are they made by history, or do they

make it? In *Indispensable*, Harvard Business School professor Gautam Mukunda offers an enticingly fresh look at how and when individual leaders really can make a difference. By identifying and analyzing the hidden patterns of their careers, and by exploring the systems that place these leaders in positions of power, *Indispensable* sheds new light on how we may be able to identify the best leaders and what lessons we can learn, from both the process and the result. Profiling a mix of historic and modern figures—from Thomas Jefferson and Abraham Lincoln to Winston Churchill and Judah Folkman—and telling the stories of how they came to power and how they made the most important decisions of their lives, *Indispensable* reveals how, when, and where a single

individual in the right place at the right time can save or destroy the organization they lead, and even change the course of history. *Indispensable* will also help you understand this new model so you can use it in your own life—whether you're a citizen casting a ballot, an executive choosing your next CEO, or a leader trying to make your mark.

A case for a thoroughly Christian economics. This is the support volume for *Sovereignty And Dominion: An Economic Commentary on Genesis, Volume 1*. Appendix A and Appendix C are considered two of the three most important

academic articles Gary North has ever written. The third most important, "The Epistemological Problem of Social Cost," was turned into a book: *The Coase Theorem* (1991). It appears in the first appendix volume for *Exodus*. Appendix A is a critique of the most important sleight-of-mind, bait-and-switch scam in modern thought: Darwinism's "man, the unplanned speck" into "man, the planning god." It lies at the heart of modernity. Appendix C is a detailed study of the implications of the battle between Darwinism and Christianity. These two essays took Gary North over 500 hours to write. Appendix B, on F. A. Hayek, presents his critique of Hayek's

epistemology. He was an evolutionist. As such, he believed that there are no fixed standards: in ethics, epistemology, or social order. He was a true heir of 18th-century Scottish rationalism, as he proclaimed. It is a mistake to rest the case for liberty on Hayek's social philosophy. ----- This series, *An Economic Commentary on the Bible*, is published by Reconstructionist Radio, a producer and provider of Reformed (Postmillennial, Presuppositional, Covenantal, Calvinist, and Theonomic) Christian Reconstructionist podcasts, audiobooks, lectures, sermons, music, and other media. Content is made available from authors such as Gary North (Institute for

Christian Economics, Point Five Press), David Chilton, R.J. Rushdoony (Chalcedon Foundation), Joel McDurmon, Phil Kayser (Biblical Blueprints), Greg Bahnsen (Covenant Media Foundation), Stephen Perks (Kuyper Foundation), Bojidar Marinov (Christendom Restored, Bulgarian Reformation), and many more.

The Internet has changed our social spaces, our political and social realities, our use of language, and the way we communicate, all with breathtaking speed. Almost everyone who deals with the Internet and the new world of cyberspace communication at times feels bewildered, dismayed, or even infuriated. In this clear and helpful book, computer communications scholar Laura J. Gurak takes a close look at the critical issues of online communication and discusses how to become literate in the new mass medium of our era. In cyberspace, Gurak shows

us, literacy means much more than knowing how to read. Cyberliteracy means being able to sort fact from fiction, to detect extremism from reasonable debate, and to identify gender bias, commercialism, imitation, parody, and other aspects of written language that are problematic in online communication. Active reading skills are essential in cyberspace, where hoaxes abound, advertising masquerades as product information, privacy is often compromised, and web pages and e-mail messages distort the truth. Gurak analyzes the new language of the Internet, explaining how to prepare for its discourse and protect oneself from its hazards. This book will appeal to anyone with an interest in the impact of the Internet on the practices of reading and writing and on our culture in

As the United States marks its first presidential election of a new century, Witcover shows us how professional mercenaries -- with little party loyalty and diminished political principles, driven by an insatiable need for money

-- are poisoning public life. At the same time, politicians themselves have condoned and even encouraged these developments, responding to the demands of a media-driven age in which the press corps pursues its own quest for celebrity and financial reward.

Sharp, revealing, and rich with anecdotes, *No Way to Pick a President* offers a wealth of presidential history, from the role of the vice president's office to campaign funds, television and the electoral college.

From mother-daughter team Hillary Clinton and Chelsea Clinton comes a celebration of family, tradition and discovery, and an ode to mothers,

grandmothers and the children they love. Grandma Dorothy shared her love of gardens with her daughter, Hillary, and her granddaughter, Chelsea. She taught them that gardens are magical places to learn, exciting spaces for discovery, quiet spots to spend time with family and beautiful areas to share stories and celebrate special occasions. But most of all, she taught them that in her gardens, her love grew and blossomed. In this inspiring and heartwarming mother-daughter story, Hillary Clinton and Chelsea Clinton team up to show readers how sharing the things we love with the people we love can create powerful, everlasting bonds between generations. Praise for Grandma's Gardens: "A deeply affectionate tribute to the bounty of nature and the

love of gardening." --Publishers Weekly "Filled with mindfulness, the story inspires children to reflect on family and keep memories alive." --Booklist
Cyberliteracy Harper Collins
Here is the love story of a beautiful Irish girl who rode horses like an Arizona cowboy, whose hair was red as flame, and whose lover was an English gentleman. But then, there was the Spaniard, too! Hot-headed, he was, passionate and lawless as a Tartar. Needless to say the story takes some startling turns. The end is surprising. And the satisfying conclusion it all comes to is this, that the eternal feminine still responds to courage in the male.

Thaw of the Lich Lord is a complete campaign for Frostgrave that will challenge both new and veteran players. Through a series of linked scenarios, players discover the existence of a new power in the Frozen City, one who was old when the great city was still young, and who saw both its rise and its disastrous fall. Warbands will confront the Lich Lord's minions, race against his agents to seize possession of mysterious artefacts, and brave the perils of Frostgrave in search of his lair. Eventually, they will need to muster all their courage to venture into the

depths of the city and face the Lich Lord himself. Not all wizards will seek to stop the Lich Lord, however, and full rules for giving into his corruption and following the dark road to becoming an undead lich are presented for those who crave power and immortality above all else. While the campaign presents many new threats against which wizards and their warbands must test themselves, including an expanded bestiary, it also offers additional resources, such as new henchmen that can be recruited and unique magical treasures that can spell the difference between survival and oblivion.

If you program in C++ you've been neglected.

Test-driven development (TDD) is a modern software development practice that can dramatically reduce the number of defects in systems, produce more maintainable code, and give you the confidence to change your software to meet changing needs. But C++ programmers have been ignored by those promoting TDD--until now. In this book, Jeff Langr gives you hands-on lessons in the challenges and rewards of doing TDD in

C++. Modern C++ Programming With Test-Driven Development, the only comprehensive treatment on TDD in C++ provides you with everything you need to know about TDD, and the challenges and benefits of implementing it in your C++ systems. Its many detailed code examples take you step-by-step from TDD basics to advanced concepts. As a veteran C++ programmer, you're already writing high-quality code, and you work hard to maintain code quality. It doesn't have to be that hard. In this book, you'll learn: how to use TDD to improve legacy C++ systems how to identify and deal with troublesome system dependencies how to do dependency injection, which is particularly tricky in C++ how to use testing tools for C++ that aid TDD new

C++11 features that facilitate TDD As you grow in TDD mastery, you'll discover how to keep a massive C++ system from becoming a design mess over time, as well as particular C++ trouble spots to avoid. You'll find out how to prevent your tests from being a maintenance burden and how to think in TDD without giving up your hard-won C++ skills. Finally, you'll see how to grow and sustain TDD in your team. Whether you're a complete unit-testing novice or an experienced tester, this book will lead you to mastery of test-driven development in C++. What You Need A C++ compiler running under Windows or Linux, preferably one that supports C++11. Examples presented in the book were built under gcc 4.7.2. Google Mock 1.6 (downloadable for free; it

contains Google Test as well) or an alternate C++ unit testing tool. Most examples in the book are written for Google Mock, but it isn't difficult to translate them to your tool of choice. A good programmer's editor or IDE. cmake, preferably. Of course, you can use your own preferred make too. CMakeLists.txt files are provided for each project. Examples provided were built using cmake version 2.8.9. Various freely-available third-party libraries are used as the basis for examples in the book. These include: cURL JsonCpp Boost (filesystem, date_time/gregorian, algorithm, assign) Several examples use the boost headers/libraries. Only one example uses cURL and JsonCpp.
