The heavily armed P-61 Black Widow was the U.S. Army Air Force's first dedicated night fighter. Equipped with radar, four .50 caliber machine guns and four 20mm. cannons, the Widow was a fearsome adversary. It flew as both an intruder and interceptor in Europe and the Pacific. Originally printed by Northrop in 1945, the YP-61 Pilot's Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Originally classified "Restricted," the manual was declassified long ago and is here reprinted in book form. This affordable facsimile has been reformatted, and color images appear as black and white. Care has been taken however to preserve the integrity of the text.

1. HISTORICAL BACKGROUND In the late 1950s many members of the design professions-Engineers as well as Ar chitects-became concerned about their exposure to claims for professional malprac tice and particularly about the increasing number of claims that had been successfully brought against them arising out of their Construction Phase activities. This led to special studies sponsored by the American Institute of Architects and the Engineers joint Counsel. The outcome was twofold: the development of a policy of professional liability insurance to insure Engineers and Architects against errors and omissions in the performance of their professional services, and the review and development of the customary contractual arrangements defining the design profeSSional's undertakings vis a vis his client (the Owner), the Project to be designed, and the Contractor who was to implement that design. At the outset, the AIA's Owner-Architect Agreement (No. B131), General Conditions (No. A201) and the Owner-Contractor Agreements (Nos. A101 & 111) were the documents most frequently used by design professionals, and these received particular attention. In the early 1960s it became apparent that there was a need for a separate series of documents prepared to address these relationships when the Project to be designed involved primarily engineering considerations. The number of Projects for which the Engineer was employed by the Owner as the prime professional to handle the Project design and construction administration was increasing.
