At once a digital ethnography of smartphones and a classically conceived village-based ethnography, this book relocates the study of digital technologies to rural Melanesia, with a focus on the Lau of Malaita, Soloman Islands. In this 'technography', Geoffrey Hobbis studies the materiality and functional attributes of smartphones and their object biographies—modes of acquisition, maintenance, uses, limitations and the problems specific to this region in adopting and adapting smartphones in everyday life. As he examines the various uses of smartphones, as both telephone and multimedia device, Hobbis also explores the social and cultural transformations, the hopes and uncertainties, with which they are associated. Ultimately, in bringing together a study of digital technologies with classical anthropological theory, The Digitizing Family develops a theory of smartphones as kinship technologies and supercompositional

objects.

[Animation overview](#) Use the Animation workspace to create exploded views and to animate parts and assemblies.

[Animations](#) can be used to evaluate and communicate design functionality and to illustrate assembly or repair operations. [Storyboards](#) A storyboard is a collection of views and actions along a timeline. A single storyboard represents one animation. Use multiple storyboards to create a collection of animations. You can edit the default storyboard names to display meaningful titles. The storyboard duration is the total running time of the actions on that storyboard. [Actions](#) An action is a visual representation of a component transforming during a point in time.

Add actions to the timeline on a storyboard to create an animation. You can adjust the duration and placement of each action on the timeline. When the playhead is on the timeline at a positive point in time, actions are captured and can be edited. The timeline displays all actions included in the storyboard. When the playhead is at Time 0 or in the Scratch Zone (the empty zone to the left of the timeline), actions are not being recorded, but the transforms performed are honored. This is especially useful for setting up a scene in preparation for the animation.
