"The Truth about the Desert explores the living conditions under which Tuareg

refugees from northern Mali rebuild their lives in the Nigerien diaspora and how these conditions affect their self-understandings and cultural practices, established status hierarchies, and religious identity formation. The book counterbalances an earlier scholarly preoccupation with Tuareg nobility by zoning in on two inferior social status groups, the Bellah-Iklan and free-born vassals, which have been neglected in conventional accounts of Tuareg society. By offering a multi-layered analysis of social status and identity formation in the diaspora, it pleads for a more dynamic understanding of Tuareg socio-political hierarchies. Analyzing in detail how both status groups rely on moralizing labels and racial stereotyping to reformulate their own social and ethnic identity, the study highlights refugees' aspirations and capacities to remake their imaginary and material worlds in the face of adverse and often deeply humiliating living conditions. The book provides vital insights for refugee studies and for scholarly debates on ethnicity, social identity formation, and memory politics. Souleymane Diallo earned his PhD in socio-cultural anthropology from

the University of Cologne. His research interests include forceful migrations and memory politics; Islam, spiritual authority, and power in the Sahara; and the theory and practice of anthropological filmmaking." Regeneration of tissue to replace damaged or injured tissue is the goal of tissue engineering. Biomaterials like polyglycolic acid, collagen and small-intestinal submucosa provide a temporary scaffold to guide new tissue growth and organization. Typically, they need to be biodegradable, showing good cell attachment and proliferation and they should possess appropriate mechanical properties (Kim et al., 2000). Synthetic polymers fulfill most of these requirements but lack cell-adhesion peptides on their surface to enhance cell attachment. Cell-adhesion peptides are present in ECM proteins like collagen and elastin. Thus a synthetic polymer coated with ECM proteins would result in a scaffold that mimics the natural cellular environment with enhanced cell attachment and proliferation. The new bioactive scaffold will be made by combining a synthetic polymer coated with a layer of recombinant ECM proteins produced by CHO cells. The first step

consists of identifying polymers that give best results in terms of CHO cell attachment and growth. Classical techniques to determine biomass are inappropriate to evaluate 3-D structures. Thus a screening system based on stable GFP expressing CHO cells was used to compare the different scaffolds. Simple fluorescent measurement after cell lysis allows determining cell attachment and proliferation on synthetic polymers. Finally CHO cells producing human recombinant collagen I and elastin were generated. We showed that both proteins are expressed and secreted by CHO DG44 cells. 2 Materials and Methods 2.

Child soldiers are generally perceived as faultless, passive victims. This ignores that the roles of child

soldiers vary, from innocent abductee to wilful perpetrator. This book argues that child soldiers should be judged on their actions and that treating them like a homogenous group prevents them from taking responsibility for their acts.

In vielen Post-Konflikt-Gesellschaften weltweit beteiligen sich ehemalige Rebellengruppen als politische Parteien an Wahlen. Die Studie behandelt die Gründung und den Erfolg solcher "Rebellparteien" in Afrika und geht der Frage nach, inwiefern institutionelle Strukturen diese Prozesse beeinflussen. Der entwickelte Forschungsansatz ermöglicht zunächst eine systematische Erfassung aller afrikanischen Fälle seit 1989, um dann komplexe Kausalbeziehungen mit einer qualitativ vergleichenden Analyse mit Fuzzy-Sets (fsQCA) aufzudecken. Die Ergebnisse zeigen u.a., dass Institutionen wie
