For many schools in today's economy, money is tight, and costs must be closely monitored. With this in mind, there is one area where educators can save: free, open source software. In Energize Education through Open Source, Christopher D. Whittum explains the ins and outs of a huge

repository of educational and productivity software that is available and open source. Filled with practical examples, this guide shares how this software and hardware can be obtained, provides suggestions for integrating it, and shows how schools can find the options that work best for their students and teachers. Whittum, who has worked with computers for more than thirty years, addresses and explains the Linux operating system, discusses how the open source products can be integrated into existing curricula, and provides suggestions for applications that could serve as aids to learning. Energize Education Through Open Source provides a feasible technology solution for schools facing financial barriers.

Two different and opposite kinds of readers are developed at the very beginning stages of reading instruction as the result of different and opposite kinds of teaching. One kind of reader is taught to read by the 'sound' of print, and reads automatically and with great accuracy. The other kind of reader is taught to read by the 'meaning' of print, as Chinese characters are read, and not only reads inaccurately, but is actually encouraged to do so by so-called 'psycholinguistic guessing.' The Hidden Story explains why the teaching of 'psycholinguistic guessing' to beginning readers, although it manifestly results in a life-long disability, has been the 'experts'' instructional preference ever since 1870, although the term itself is a relatively recent invention.

Banana Pi is a dual core single board microcomputer like Raspberry Pi but is much faster, more cost-effective, and

performs more efficiently than Raspberry Pi. Banana Pi Cookbook is a practical guide that starts with setting up Banana Pi and moves on to exploring the more advanced capabilities of the device. You will learn to build a decent Linux-based operating system that can resolve common server tasks (Samba, Web, DLNA) and multimedia challenges. Also, you will see how to use the GPIO opportunities by building simple but straightforward circuits. By the end of this book, you will be an expert in using Banana Pi to deploy a variety of hardware and software applications.

Official Fedora Companion Franzis Verlag Inhaltsangabe:Introduction: This thesis represents the results of my research in synchronization of television during my graduation project. I will describe a solution, which is actually standardized and give a solution on how to implement it in this document. It is a pleasure to thank the people who made this thesis possible. First of all these are my supervisors Oskar van Deventer and Michael Maruschke, who supported me by reviewing my work and discussion on content. I also would like to thank Ray van Brandenburg and Hans Stokking, who were always open for discussion. This work was done at TNO Information and communication technology. The part of TNO this thesis is placed has its main research topic in media technologies and content delivery systems. Research is done in cooperation with Dutch and international companies as well, as with international research groups. TNO is also a member in the NGNLab project, which main purpose is Next Generation Networks

and topics related to that. The purpose of this thesis is to create a proof of concept of the synchronization system for IPTV described by ETSI TS 182 027 [2] and ETSI TS 183 063 [1] by using the protocol extension to RTCP from ETSI TS 183 063 Annex W. During planing, implementation and evaluation specifications have to be proofed and requirements, for a sufficient work have to be generated, if the standardized environment is not clear defined on some part of the implementation or not sufficient. This document should give the reader an overview of the necessary requirements and the way of development of the proof of concept. This thesis is divided into seven chapters. The first chapters are the theoretical base, followed by the planing and evaluation of the prototyped IDMS system. In chapter two an overview of the thesis background and necessary protocols needed for communication is given. This is completed by a description of the network framework, which will be the platform for the synchronization approach. The extension for television usage of the network described in chapter two is explained in chapter three. The Software analyzed for the usage in the prototyped implementation is described in chapter four. The necessary modifications and extensions to this software and structure of the applications used to build the environment for the described implementation completes the theoretical part of the thesis. Chapter five shows these software planing. Chapter six gives and overview of [...]

Mergent OTC Unlisted Manual Pearson Education Customizable processors have been described as the next natural step in the evolution of the microprocessor business: a step in the life of a new technology where top performance alone is no longer sufficient to guarantee market success. Other factors become fundamental, such as time to market, convenience, energy efficiency, and ease of customization. This book is the first to explore comprehensively one of the most fundamental trends which emerged in the last decade: to treat processors not as rigid, fixed entities, which designers include " as is in their products; but rather, to build sound methodologies to tailor-fit processors to the specific needs of such products. This book addresses the goal of maintaining a very large family of processors, with a wide range of features, at a cost comparable to that of maintaining a single processor. First book to present comprehensively

the major ASIP design methodologies and tools without any particular bias Written by most of the pioneers and top international experts of this young domain Unique mix of management perspective, technical detail, research outlook, and practical implementation

Customizable Embedded Processors Springer Oracle Forms is the single most important tool used to create sophisticated applications for Oracle databases. The latest versions of Oracle Forms have reflected Oracle's Internet-centered strategy, adding powerful capabilities for building Web-centered applications to the product's traditional client/server focus. In Oracle Forms Developer's Handbook, one of the world's leading Oracle developers presents powerful techniques for leveraging Oracle Forms in both web-centered and client/server environments. This is the first Oracle Forms book to reflect the brand-new Version 6i. Oracle Forms Developer's Handbook starts by presenting step-by-step instructions for using every tool in the Forms environment, including the Forms Designer, Object Navigator, and the Layout Editor. Next, learn how to use PL/SQL in Forms applications; master all of the methods and objects available to Forms programmers; and learn how to apply object-oriented programming practices to Forms development, including inheritance, reusability, encapsulation, and polymorphism. Then, walk step-by-step through

developing a series of complete, elegant, well-
performing Web-based and client/server applications.
An accompanying CD-ROM contains all of the book's
applications and source code examples, plus all files
needed to create and populate sample database
objects -- enabling readers to start from any chapter
and follow the hands-on activities.
