n: This thesis represents
the results of my research

in synchronization of television during my graduation project. I will describe a solution, which is actually standardized and give a solution on how to implement it in this document. It is a pleasure to thank the people who made this thesis possible. First of all these are my supervisors Oskar van Deventer and Michael Maruschke, who supported me by reviewing my work and discussion on content. I also would like to thank

Ray van Brandenburg and Hans Stokking, who were always open for discussion. This work was done at TNO Information and communication technology. The part of TNO this thesis is placed has its main research topic in media technologies and content delivery systems. Research is done in cooperation with Dutch and international companies as well, as with international research groups. TNO is also a member in the NGNLab

project, which main purpose is Next Generation Networks and topics related to that. The purpose of this thesis is to create a proof of concept of the synchronization system for IPTV described by ETSI TS 182 027 [2] and ETSI TS 183 063 [1] by using the protocol extension to RTCP from ETSI TS 183 063 Annex W. During planing, implementation and evaluation specifications have to be proofed and requirements, for a

sufficient work have to be generated, if the standardized environment is not clear defined on some part of the implementation or not sufficient. This document should give the reader an overview of the necessary requirements and the way of development of the proof of concept. This thesis is divided into seven chapters. The first chapters are the theoretical base, followed by the planing and evaluation of the prototyped IDMS system. In chapter two an overview of the thesis background and necessary protocols needed for communication is given. This is completed by a description of the network framework, which will be the platform for the synchronization approach. The extension for television usage of the network described in chapter two is explained in chapter three. The Software analyzed for the usage in the prototyped implementation is described in chapter four. The necessary modifications and extensions to this software and structure of the applications used to build the environment for the described implementation completes the theoretical part of the thesis. Chapter five shows these software planing. Chapter six gives and overview of [...] Linux Mint 22 Routledge PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the

This book covers the Linux Mint 22 release, focusing on desktops and administrative tools. The emphasis here is on what users will face when using Linux Mint, covering topics like installation, applications, software management, the Linux Mint desktops (Cinnamon, MATE, and Xfce), shell commands, network connections, and

system administration tasks. Linux Mint 22 introduces several new features, as well as numerous smaller modifications. It is based on the Ubuntu 24.04 long-term support release. The Cinnamon, MATE, and Xfce desktops are examined in detail. Advanced components are also examined such as Samba server configuration, systemd service management, and Linux Mint software management applications. Part 1 focuses on getting started, covering Linux Mint information and resources,

using the Linux Mint Live DVD/USB, installing and setting up Linux Mint, upgrading Linux Mint, basic use of the desktops (Cinnamon, MATE, and Xfce), and connecting to wired and wireless networks. Repositories and their use are covered in detail. Software Manager, Synaptic Package manager, and the apt command are discussed. The Linux Mint X-Apps are also reviewed. Part 2 covers the Cinnamon, MATE, and Xfce desktops (KDE is no longer supported by Linux Mint,

though you can install the Ubuntu version, Kubuntu). The Cinnamon desktop has the Cinnamon menu with a favorites sidebar similar to the Ubuntu dock. The MATE desktop is derived from the GNOME 2 desktop, but with a more advanced applications menu. The Xfce desktop is a streamlined version of Linux Mint, with extensive configuration options to setup the desktop as you want. Part 3 deals with administration topics, first discussing system tools like the GNOME system monitor, the Disk Usage

Analyzer, Disk Utility, and Seahorse key management. A detailed chapter on Linux Mint system administration tools is presented, covering tasks such as managing users and file systems, Bluetooth setup, network folder and file sharing, an printer administration discussed. The network connections chapter covers network tasks, including manual configuration of wired and wireless connections, and firewalls. Shell configuration using shell script files are discussed. The systemd

management of services and the Samba Windows server are examined in detail.
