Research on communication and information technologies is of growing importance to sociology and the interdisciplinary examination of communication and (new) media. This volume includes eight chapters examining recent developments in the field, illustrating the maturation, vibrancy, and diversity of this field of study as well as pointing to rich new avenues for scholarly exploration. Contributions aptly chart three key developments that characterize current research on communication and digital media. First, chapters demonstrate the maturation of work on measurement, demonstrating the importance of refining measurements of online activities and their consequences. For instance, contributions evaluate: social network measures frequently used in online research; alternative measures for online activity; and alternative measures of Twitter activity. Second, the volume showcases continued work on understanding user behaviour, including research on the consequence of reward systems similar to badges and on the limitations of purely technological solutions to social dilemmas in emergency preparedness. Finally, chapters identify emerging questions for the field

related to social media, such as research on potential privacy and identity implications of social media, different dispositions toward social media use, and variation in levels of social media usage. This book was originally published as a special issue of *Information, Communication & Society*.

Increasingly, modern medicine relies

on so called traditional or ancient medical knowledge. Holistic practices such as adhering to proper diet, observing rules for appropriate behavior, and administering medical preparations are coupled with the latest technology and methods to treat the whole patient. In light of this trend, there is much to be gained from understanding of one of the oldest medical systems still in existence. *Tibetan Medicinal Plants* provides you a detailed analysis of how Tibetan plants are used in this centuries old system. The book opens with a summary of Tibetan medicine and covers the various habitats in which the plants are found. The main part of this volume encompasses 60 monographs listed by the Tibetan plant name. Each monograph consists of several chapters addressing different topics related either to the Tibetan or the Western approach. Most of the monographs contain a description of the macroscopic and microscopic characteristics of the used plant parts, and anatomical features of 76 plants are provided. Each

monograph presents an overview of the known chemical constituents and pharmacological properties of each plant and describes their use in Tibetan medicine. In contrast to other publications on Tibetan medicine, where translations of the Tibetan terms are given in other languages, this book treats the Tibetan word as a technical term, keeps the Tibetan term and explains its meaning, lessening confusion by reducing the number of translations. Traditional Tibetan medicine has been in existence for centuries. Curative practices existed in the prebuddistic era, and the art of healing developed more than 2500 years ago. Tibetan Medicinal Plants provides a comprehensive overview of all plant types, thus making it easier to grasp the Tibetan concept. It gives you a comprehensive look at this centuries old science.

In this book, faculty members from a wide

range of disciplines reflect on how they

engage their academic specializations to

teach students about the science, politics, and

ethics of climate change. The contributors

provide methods, strategies, rationales, and

theoretical justifications for teaching climate

issues in the university.
