The Ruger 10/22 is one of the most popular .22-caliber rifles of all time. It is relatively inexpensive, exceptionally reliable and accurate, and easy to work on, and parts are widely available. But as good as these versatile little rifles are, they can be made even better with a little work on their triggers, actions and barrels. This work is easy to do, even for people with little or no machining or gunsmithing experience, and it is inexpensive. And after you have customized your 10/22, why not go the extra step and add a legal suppressor so that you can use your rifle for animal control, in survival situations or just to save your hearing? With this book and very little time, effort and money, you can turn your Ruger 10/22 into the ultimate do-anything weapon.

This book compiles technical design notes from the teams that have participated in ROBOCON Malaysia 2019. Every chapter details how the team design their robots to achieve the mission specified in ROBOCON Malaysia 2019 rules. Every report consists of three sub-topics: mechanical design, electronics circuit design and programming. The reports presented in this collection are written in English. The purpose of this book is to share and pass on the valuable knowledge of engineering and robotics to other robotic enthusiasts especially in Malaysia. This book would be the first in the series to set the trend of knowledge sharing from the ROBOCON Malaysia. We hope this book series would be a reference for future robotics competition and robotics enthusiasts with the aim of being able to develop more advance robotics system by learning from the experiences of others.

The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of Feedback Systems is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Å str ö m and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Å str ö m and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory
