Research and Advanced Technologies for Digital Libraries. Following previous events in Pisa (1997), Heraklion (1998), Paris (1999), Lisbon (2000), and Dastadt (2001), this year ECDL was held in Rome. ECDL 2002 contributed, together with the previous conferences, to establishing ECDL as the major European forum focusing on digital libraries and associated technical,

practical, and social issues. ECDL 2002 continued the tradition already established by the previous conferences in meeting the needs of a large and diverse constituency, which includes researchers, practitioners, educators, policy makers, and users. The focus of ECDL 2002 was on underlying principles, methods, systems, and tools to build and make available effective digital

libraries to end users. Architecture, metadata, collection building, web archiving, web technologies, - books, OAI applications, preservation, navigation, query languages, audio video retrieval, multimedia-mixed media, user studies and evaluation, humanities, and digital libraries were some of the key issues addressed. An international Program Committee was set up

composed of 61 members, with representatives from 25 countries. A total of 145 paper submissions, 15 poster submissions, and 18 proposals for demos were received. Each paper was evaluated by 3 referees and 42 full papers and 6 short papers of high quality were selected for presentation. SAS Essentials

PDF--to most of the world it stands for that rather tiresome format

used for documents downloaded from the web. Slow to load and slower to print, hopelessly unsearchable, and all but impossible to cut and paste from, the Portable Document Format doesn't inspire much affection in the average user. But PDFs done right is another story. Those who know the ins and outs of this format know that it can be much more than electronic paper.

Postulated word-formation rules often exclude formations that can nevertheless be found in actual usage. This book

presents an in-depth investigation of a highly heterogeneous word-formation pattern in English: the formation of nouns by suffixation with "-ee." Rather than relying on a single semantic or syntactic framework for analysis, the study combines diachronic, cognitive and language-contact perspectives in order to explain the diversity in the formation and establishment of "-ee" words. It also seeks to challenge previous measurements of productivity and proposes a new way to investigate the

relationship between actual and possible words. By making use of the largest and most up-to-date electronic corpus the World Wide Web as a data source, this research adds substantially to the number of attested "-ee" words. It furthermore analyses this word-formation pattern in different varieties of English (British vs. American English; Australian English). Due to the multiplicity of approaches and analyses it offers, the study is suitable for courses in English word-formation, lexicology, corpus linguistics and

historical linguistics."
