A collection of essays that “do an incredible job of balancing the wonders and horrors of the force that is Wal-Mart” (Booklist, starred review). Edited by one of the nation’s preeminent labor historians, this book marks an ambitious effort to dissect the full extent of Wal-Mart’s business operations, its social effects, and its role in the United States and world economy. Wal-Mart is based on a spring 2004 conference of leading historians, business analysts, sociologists, and labor leaders that immediately attracted the attention of the national media, drawing profiles in the New York Times, Los Angeles Times, and the New York Review of Books. Their contributions are adapted here for a general audience. At the end of the nineteenth century, the Pennsylvania Railroad declared itself “the standard of the world.” In more recent years, IBM and then Microsoft seemed the template for a new, global information economy. But at the dawn of the twenty-first century, Wal-Mart had overtaken all rivals as the world-transforming economic institution of our time. Presented in an accessible format and extensively illustrated with charts and graphs, Wal-Mart examines such topics as the giant retailer’s managerial culture,

revolutionary use of technological innovation, and controversial pay and promotional practices to provide the most complete guide yet available to one of America’s largest companies. “Like archaeologists who pick over artifacts to understand an ancient society, the scholars here [are] examining Wal-Mart for insights into the very nature of American capitalist culture.” —The New York Times “Stimulating perspectives on the world’s largest corporation.” —Publishers Weekly *Siamese and Other Short-Haired Cats* Elsevier

This collection of eleven essays re-evaluates Edward Said’s definition of ‘orientalism’ widely misconstrued as being merely postcolonial and contestable. The volume emphasizes the need to move beyond the prejudice and stereotyping tied to the context of colonial exploitation. It challenges the assumption that oriental studies only served to segregate cultures and undermine the oriental peoples’ capacity for self-formation. This book shows how cultures can generate studies of themselves on their own and that the impetus for such work was clearly noticeable at least in Indian cultural scholarship during the colonial period. The contributors bring to light the orientals’ ordering of themselves and expose the fallacy that western imperialist discourse defined and described us. In the process, they draw upon Said’s distinction between ‘oriental studies’ and ‘orientalism’.

The Series The new book series "Nanomaterials for the Life Sciences," successor to the highly acclaimed series "Nanotechnology for the Life Sciences," provides an in-depth overview of all nanomaterial types and their uses in the life sciences. Each volume is dedicated to a specific material class and covers fundamentals, synthesis and characterization strategies, structure-property relationships and biomedical

applications. The new series brings nanomaterials to the life scientists and life science to the materials scientists so that synergies are seen and developed to the fullest. Written by international experts of various facets of this exciting field of research, the ten volumes of this single source of information comprehensively cover the complete range of nanomaterials for medical, biological and cybernetic applications. The series is aimed at scientists of the following disciplines: biology, chemistry, materials science, physics, bioengineering, and medicine, together with cell biology, biomedical engineering, pharmaceutical chemistry, and toxicology, both in academia and fundamental research as well as in pharmaceutical companies. Volume 3: Mixed Metal Nanomaterials Volume 3 covers the aspects of synthesis, characterization and application of bimetallic and multielemental spherical and anisotropic nanomaterials in the life sciences. West's Business Law The New Press

When it was first published (in 1991), Political Agenda of Education was hailed as an outstanding contribution to educational theory. This thoroughly revised edition sharpens the focus and explanatory range of the original framework. In particular, the author has incorporated the complex terrain of gender and girls' education while bringing in a more nuanced discussion of caste as a factor of equality in educational opportunity. The book is divided into two parts. Part I analyzes the circumstances surrounding the establishment of a colonial system of educational administration and the implications it had for both teaching and curriculum. Part II locates educational reform within the dynamics of the three major quests of the freedom struggle: the demand for equal participation in education by the lower castes; the quest for self-identity; and the idea of progress. Krishna Kumar uses the history of ideas to develop insights which are highly relevant for the challenges facing the system of education in India and the rest of South Asia today.

This book contains fourteen research papers which are expanded versions of conferences given at a meeting held in September 1996 in Cortona, Italy. The topics include blowup questions for quasilinear equations in two dimensions, time decay of waves in LP, uniqueness results for systems of conservation laws in one dimension, concentration effects for critical nonlinear wave equations, diffraction of nonlinear waves, propagation of singularities in scattering theory, caustics for semi-linear oscillations. Other topics linked to microlocal analysis are Sobolev embedding theorems in Weyl-Hormander calculus, local solvability for pseudodifferential equations, hypoellipticity for highly degenerate operators. The book also contains a result on uniqueness for the Cauchy problem under partial analyticity assumptions and an article on the regularity of solutions for characteristic initial-boundary value problems. On each topic listed above, one will find new results as well as a description of the state of the art. Various methods related to nonlinear geometrical optics are a transversal theme of several articles. Pseudodifferential techniques are used to tackle classical PDE problems like Cauchy uniqueness. We are pleased to thank the speakers for their contributions to the meeting: Serge Alinhac, Mike Beals, Alberto Bressan, Jean-Yves Chemin, Christophe Cheverry, Daniele Del Santo, Nils Dencker, Patrick Gerard, Lars Hormander, John Hunter, Richard Melrose, Guy Metivier, Yoshinori Morimoto, and Tatsuo Nishitani. The meeting was made possible in part by the financial support of a European commission program, "Human capital and mobility CHRX-CT94-044."

Gem Cutter Because Badass Isn't a Job Title Wiley-Blackwell

Whilst most structures made using concrete and cement-based composites have not shown signs of premature degradation, there have been notable exceptions. In addition, there is increasing pressure for new structures to remain in serviceable condition for long periods with only minimal maintenance before being recycled. All these factors have highlighted the issues of what affects the durability of these materials in different

circumstances and how material properties can be measured and improved. Durability of concrete and cement composites summarises key research on these important topics. After an introductory chapter, the book reviews the pore structure and chemistry of cement-based materials, providing the foundation for understanding the particular aspects of degradation which are discussed in the following chapters. These include dimensional stability and cracking processes, chemical and microbiological degradation of concrete, corrosion of reinforcing and prestressing steels, deterioration associated with certain aggregates, effects of frost and problems involving fibre-reinforced and polymer-cement composites. With its distinguished international team of contributors, Durability of concrete and cement composites is a standard reference for all those concerned with improving the service life of structures using these materials. Analyses a range of materials such as reinforced steel in concrete, pre-stressed concrete and cement composites Discusses key degradation phenomena such as cracking processes and the impact of cold weather conditions A standard reference for those concerned with improving the service life of structures using concrete and cement based composites
