You've mastered the FAA handbooks and wrapped up one of the toughest orals of your flying career. You can now fly and talk at the same time, all from the right seat. You can create lesson plans, enter mysterious endorsements in student logbooks, and actually explain the finer points of a lazy eight. That's everything you'll ever need to know in order to flight instruct...or is it? This book is designed to help with all those "other" flight instructing questions, like why and how to become a CFI in the first place, and how to get your first instructing job. Where do flight students come from? And once you've got them, how do you keep them flying? How can you optimize your students' pass rate on checkrides? And how do you get flight customers to come back to you for their advanced ratings?

Written by Greg Brown (author of *The Turbine Pilot's Flight Manual* and *Job Hunting*)

for Pilots), this Second Edition of The Savvy Flight Instructor provides nearly 20 years of additional wisdom, experience, and know-how, and includes new "Finer Points" contributed by industry experts. While this edition retains the key marketing, pilot training, and customer support concepts that made the original edition required CFI reading, those areas have been refined and expanded to incorporate the latest industry philosophies and techniques. Readers will learn how best to sell today's prospects on flying and how to utilize online marketing and social media. Greg Brown lays out tips for offering flight-instructing services with the sophistication of other competitive activities that beckon from just a click away on potential customers' computers and mobile devices. Aspiring flight instructors will learn why and how to qualify, and how to get hired once you earn the certificate. There's extensive coverage of techniques for systematizing customer success and satisfaction policies, strategies for pricing and structuring flight training to fit today's market, integration of affordable simulation technologies into your training programs, and tips for coping with the "CFI shortage." Along with tips on how to attract and retain flight students, the author examines professionalism in

flight instructing. In short, The Savvy Flight Instructor shows you how to use your instructing activities to increase student satisfaction, promote general aviation, and advance your personal flying career all at the same time. Contributing writers in the new "Finer Points" sections are Heather Baldwin (a commercial pilot and marketing writer), and CFIs Jason Blair (a designated pilot examiner), Ben Eichelberger (a flight training standardization expert), Dorothy Schick (flight school owner and marketing innovator), and Ian Twombly (noted flight-training writer and editor).

This book by Corey H. Evans, Russell D. White, and coauthors is a gem. There was a time when exercise testing was largely limited to cardiologists, but no more. Exercise testing, which provides information on fitness, the risk of coronary disease, and all around vitality, is now being performed in the offices of primary care physicians across the United States. Although there is a significant risk in some populations, a careful doctor who takes the trouble to become knowledgeable in exercise physiology and the pathophysiology of coronary artery disease can use exercise testing to improve his ability to give excellent, preventive medicine. Over the years I have read many books on this subject, and even contributed to some, and this one rates right up therewith the best.

Likemany multi-authored books that here is some repetition, but this is not all bad. A careful study of the various chapters will provide a depth

of knowledge that will come in good stead when problems arise. I can especially recommend the chapter on exercise physiology. When the reader has mastered the material presented in this chapter, he has acquired a knowledge base so that he can become an expert in exercise testing equal to almost anyone. Over the years I have been privileged to know several of the authors and have followed their publications. Their contributions to our knowledge base in this field have been considerable. Acquiring this book and becoming familiar with its contents will set you apart in the field of exercise testing.

The technology involved in lubrication by nanoparticles is a rapidly developing scientific area and one that has been watched with interest for the past ten years. Nanolubrication offers a solution to many problems associated with traditional lubricants that contain sulphur and phosphorus; and though for some time the production of nanoparticles was restricted by the technologies available, today synthesis methods have been improved to such a level that it is possible to produce large quantities relatively cheaply and efficiently. Nanolubricants develop a new concept of lubrication, based on these nanoparticles, and along with the authors' own research it synthesises the information available on the topic of nanolubrication from existing literature and presents it in a

concise form. Describes the many advantages and potential applications of nanotechnology in the tribological field. Offers a full review of the state-of-the-art as well as much original research that is yet unpublished. Includes sections on boundary lubrication by colloidal systems, nanolubricants made of metal dichalcogenides, carbon-based nanolubricants, overbased detergent salts, nanolubricants made of metals and boron-based solid nanolubricants and lubrication additives. Authored by highly regarded experts in the field with contributions from leading international academics. Nanolubricants will appeal to postgraduate students, academics and researchers in mechanical engineering, chemical engineering and materials science. It should also be of interest to practising engineers with petroleum companies and mechanical manufacturers.

Funk explores issues of faith and belief as she re-imagines Samson and Delilah as Ricky and Lucy of I Love Lucy fame. Gluttony is last in the seven deadly sins foot race, huffing and puffing, but it's not for lack of trying. Other poems offer a more personal point of view with assured and tender love poems. Funk writes from experience of marriage and domesticity, and of the ways in which a relationship shapes the person one becomes. A series of poems is drawn from family reminiscence. Children play flashlight tag, a father builds his daughter a tree house, a mother makes a blue velvet Christmas

dress: this is poetry created from memory's ragbag. Funk makes something captivating from the cast-off, beauty from memory. Book jacket.

This collection brings together global perspectives which critically examine the ways in which language as a resource is used and managed in myriad ways in various blue-collar workplace settings in today's globalized economy. In focusing on blue-collar work environments, the book sheds further light on the informal processes through which top

down language policies take place in different multilingual settings and the resultant asymmetrical power relations which emerge among employees and employers in such settings. Taking into account the latest debates on poststructuralist theories of language, the volume also extends its conceptualization of language to demonstrate the ways in which it extends to a wider range of multilingual and multimodal resources and communicative practices, all of which combine in unique and different ways toward constructing meaning in the workplace. The volume's unique focus on such workplaces also showcases domains of work which have generally until now been less visible within existing research on language in the workplace and the subsequent methodological challenges that arise from studying them. Integrating a range of theoretical and methodological approaches, along with empirical data from a diverse range of blue-collar workplaces, this book will be of particular interest to students and researchers in critical sociolinguistics, applied linguistics, sociology, and linguistic anthropology.
