A passionate, probing collection gathering nearly thirty years of groundbreaking reflection on culture and society alongside four new essays, by one of our most respected essayists and critics. What is the internet doing to us? What is college for? What are the myths and metaphors we live by? These are the questions that William Deresiewicz has been pursuing over the course of his award-winning career. The End of Solitude brings together more than forty of his finest essays, including four that are published here for the first time. Ranging widely across the culture, they take up subjects as diverse as Mad Men and Harold Bloom, the significance of the hipster, and the purpose of art. Drawing on the past, they ask how we got where we are. Scrutinizing the present, they seek to understand how we can live more mindfully and freely, and they pose two fundamental questions: What does it mean to be an individual, and how can we sustain our individuality in an age of networks and groups?

Strategies in Learning and Using a Second Language examines what it takes to achieve long-term success in languages beyond the first language. Distinguishing language learning from language-use strategies, Andrew D. Cohen disentangles a morass of terminology to help the reader see what language strategies are and how they can enhance performance. Particular areas of research examined in the book include: - links between the use of task-specific strategies and language performance - how multilinguals verbalise their thoughts during language learning and use strategies that learners use in test-taking contexts In this fully revised and substantially rewritten second edition, every chapter has been reworked, with material either updated or replaced. Entirely new material has also been developed based on examples of specific strategies supplied by actual learners, mostly drawn from a website featuring these strategies in the learning of Spanish grammar. *Strategies in Learning and Using a Second language* will be an invaluable resource for language teachers and researchers, as well as for administrators of second language programmes and for students of applied linguistics.

This report provides a rationale for question generation as a workable learning multiplier in distributed learning environments. The rationale was derived from a thorough review of recent research on questioning from multiple perspectives: psychology, cognitive science, computational linguistics, and information systems design. Based on this review, nine practices were identified for immediate use in both the conventional classroom and distributed learning settings. If employed properly, question generation strategies in distributed learning can increase a soldier's depth of understanding about the workings of a complex system. The strategy is particularly useful for asynchronous distance learning, where the instructor is not necessarily available to answer questions promptly.

This book, the first full-length text on the subject, explores the everyday use of music listening while driving a car. It presents the relationship between cars and music in an effort to understand how music behaviour in the car can either enhance driver safety or place the driver at increased risk of accidents. A great deal of work has been done to investigate and reduce driver distraction and inattention, but this book is the first to focus on in-cabin aural backgrounds of music as a contributing factor to human error and traffic violations. *Driving With Music* begins by outlining the automobile, its relationship to society, and the juxtaposition of music with the automobile as a complete package. It then highlights concepts from the fields of music perception and cognition, and, within this framework, looks at the functional use of background music in our everyday lives. Driver music behaviours - both adaptive and maladaptive - are explored, with the focus on contradictions and ill-effects of in-car music listening. To conclude, implications, applications and countermeasures are suggested.

In the music classroom, instructors who hope to receive aid are required to provide data on their classroom programs. Due to the lack of reliable, valid large-scale assessments of student achievement in music, however, music educators in schools that accept funds face a considerable challenge in finding a way to measure student learning in their classrooms. From Australia to Taiwan to the Netherlands, music teachers experience similar struggles in the quest for a definitive assessment resource that can be used by both music educators and researchers. In this two-volume Handbook, contributors from across the globe come together to provide an authority on the assessment, measurement, and evaluation of student learning in music. The Handbook's first volume emphasizes international and theoretical perspectives on music education assessment in the major world regions. This volume also looks at technical aspects of measurement in music, and outlines situations where theoretical foundations can be applied to the development of tests in music. The Handbook's second volume offers a series of practical and US-focused approaches to music education assessment. Chapters address assessment in different types of US classrooms; how to assess specific skills or requirements; and how assessment can be used in tertiary and music teacher education classrooms.

Together, both volumes of *The Oxford Handbook of Assessment in Music Education* pave the way forward for music educators and researchers in the field.

Teachers as Researchers urges teachers - as both producers and consumers of knowledge - to engage in the debate about educational research by undertaking meaningful research themselves. Teachers are being encouraged to carry out research in order to improve their effectiveness in the classroom, but this book suggests that they also reflect on and challenge the reductionist and technicist methods that promote a 'top down' system of education. It argues that only by engaging in complex, critical research will teachers rediscover their professional

status, empower their practice in the classroom and improve the quality of education for their pupils. Now re-released to introduce this classic guide for teachers, the new edition of *Teachers as Researchers* now also includes an introductory chapter by Shirley R. Steinberg that sets the book within the context of both the subject and the historical perspective. In addition, she also provides information on some key writing that extends the bibliography of this influential book thereby bringing the material fully up to date with current research. Postgraduate students of education and experienced teachers will find much to inspire and encourage them in this definitive book.

This book explores the causes and consequences of the discursive and legal construction of the Hungarian transborder nation through the institutionalization of non-resident citizenship and voting. Through the in-depth analysis of Hungarian transborder and diaspora politics, this book investigates how the political engagement of non-resident Hungarians impacts inter- and intra-state ethnic relations. In addition, the research also explores how institutional changes and shifting discursive strategies reify and redefine ethnic belonging narratives and the self-perception of Hungarians living outside the country. The research uses a multidisciplinary qualitative methodology which includes institutional (historical, rational choice and sociological) analysis, discourse analysis as well as interpretive methods. Through the inventive application of multiple methodologies, the book goes beyond the mostly institutional/legal analysis dominant in the study of citizenship.

Originally published in 1978, *The Process of Question Answering* examines a phenomenon that relies on many realms of human cognition: language comprehension, memory retrieval, and language generation. Problems in computational question answering assume a new perspective when question answering is viewed as a problem in natural language processing. A theory of human question answering must necessarily entail a theory of human memory organization and theories of the cognitive processes that access and manipulate information in memory. This book describes question answering as a particular task in information processing. The theoretical models described here have been built on a formulation of general theories in natural language processing: theories about language that were developed without the specific problem of question answering in mind. By requiring programmers to be concerned with the precise form of information in memory, and the precise operations manipulating that information, they can uncover significant problems that would otherwise be overlooked. An early insight into artificial intelligence, today this reissue can be enjoyed in its historical context.
